

Appendix A

Index

APPENDIX A – INDEX

A

aesthetic resources.....	4-31, 4-51, 4-70, 4-259, 5-5, 5-8, 5-11, 7-1, 7-11, 7-15
agency coordination.....	3-22, 3-64, 6-1, 6-2, 6-3, 6-8, 6-9
air quality.....	4-1, 4-31, 4-51, 4-59, 4-68, 4-69, 4-103, 4-104, 4-105, 4-106, 4-110, 4-111, 4-113, 4-114, 4-187, 4-257
Alternatives Analysis.....	1-3, 1-6, 2-1, 2-32, 2-33, 2-36, 2-39, 2-44, 6-1, 6-2, 6-4, 6-8
aquatic resources.....	4-143, 4-154, 4-156, 4-161, 4-162, 7-3
aquifer.....	4-188, 4-190, 4-191
archaeological resources.....	4-223, 4-225, 4-229, 4-232, 4-234, 4-262, 7-12
Area of Potential Effects (APE).....	4-224, 4-225, 4-226, 4-227, 4-231

B

best management practices (BMPs).....	4-114, 4-161, 4-165, 4-166, 4-167, 4-174, 4-175, 4-180, 4-181, 4-182, 4-193, 4-194, 4-204, 4-232
bicycle facilities.....	2-15, 3-15, 3-17, 3-42, 3-65, 4-102, 7-5, 7-9, 7-11
Burke-Gilman Trail.....	4-253, 4-237, 4-239, 4-248, 4-253, 4-254, 4-265

C

Cedar Creek Condominium.....	4-8, 6-6
Community Transit.....	2-4, 3-6, 3-9, 3-22, 3-28, 3-55, 3-57, 3-63, 4-184, 4-202, 7-2, 7-5, 7-6
comprehensive plan.....	1-5, 1-6, 4-15, 4-16, 4-19, 4-22, 4-23, 4-25, 4-26, 4-36, 4-100, 4-136, 4-213
congestion.....	1-1, 1-7, 3-3, 3-4, 3-5, 3-6, 3-8, 3-9, 3-19, 3-21, 3-25, 3-26, 3-28, 3-29, 3-30, 3-41, 3-42, 3-46, 3-48, 3-51, 3-54, 4-31, 4-37, 4-40, 4-44, 4-47, 4-59, 4-65, 4-67, 4-112, 4-113, 4-114, 4-187, 4-209, 4-211, 4-253, 5-1, 5-3, 5-16
construction duration.....	2-30, 3-65, 5-16
construction easement.....	4-2, 4-9, 4-14, 4-31
cultural resources.....	4-223, 4-224, 4-225, 4-258, 7-12
cumulative impacts.....	2-43, 3-49, 3-56, 3-57, 4-1, 4-2, 4-10, 4-36, 4-49, 4-66, 4-68, 4-101, 4-102, 4-113, 4-137, 4-164, 4-181, 4-182, 4-187, 4-194, 4-203, 4-207, 4-213, 4-233, 7-3

D

<i>de minimis</i>	4-260, 4-266, 4-267, 4-270, 4-271, 4-274, 4-276, 4-277, 5-10
displacements.....	4-2, 4-3, 4-4, 4-5, 4-6, 4-7, 4-8, 4-9, 4-10, 4-14, 4-23, 4-27, 4-28, 4-29, 4-37, 4-40, 4-41, 4-42, 4-49, 4-59, 4-60, 4-63, 4-69, 4-259, 5-9, 7-11, 7-14

E

economic impacts.....	4-37, 4-40, 4-46, 5-2, 5-16, 5-17, 7-11
ecosystem resources.....	4-142, 4-151, 4-152, 4-156, 4-162, 4-163, 4-164, 4-165, 5-6, 7-1, 7-4, 7-12, 7-15

Edmonds School District.....	2-38, 3-56, 4-9, 4-19, 4-20, 4-29, 4-32, 4-37, 4-49, 4-67, 4-137, 4-164, 4-182, 4-187, 4-194, 4-203, 4-213, 4-223, 5-17, 5-18, 7-2, 7-6, 7-12
electromagnetic fields	4-205, 4-206, 4-207
Emergency Vehicle Preemption.....	4-210
Endangered Species Act (ESA)	4-143, 4-148, 4-150
environmental justice	4-51, 4-68, 6-5, 6-7

F

Federal Highway Administration (FHWA)	2-6, 2-32, 2-37, 2-38, 2-45, 3-49, 4-3, 4-4, 4-5, 4-7, 4-9, 4-14, 4-31, 4-32, 4-47, 4-65, 4-70, 4-103, 4-108, 4-109, 4-118, 4-210, 4-212, 4-214, 5-6, 5-13, 5-15, 5-18, 6-8, 6-10, 7-15
Federal Transit Administration (FTA)	1-1, 1-8, 2-1, 2-32, 2-44, 2-45, 4-2, 4-68, 4-69, 4-115, 4-116, 4-117, 4-118, 4-119, 4-120, 4-128, 4-130, 4-132, 4-137, 4-138, 4-140, 4-141, 4-151, 4-211, 4-224, 4-225, 4-226, 4-229, 4-233, 4-234, 4-258, 4-260, 4-261, 4-262, 4-266, 4-267, 4-270, 4-271, 4-273, 4-274, 4-275, 4-276, 5-6, 5-10, 5-17, 5-15, 5-18, 6-1, 6-2, 6-3, 6-9, 6-10, 7-1, 7-2, 7-3, 7-10, 7-13, 7-15, 7-16
floodplains.....	4-168, 4-173, 4-178, 4-179, 4-182, 4-195, 7-3
freeway operations.....	3-10, 3-29, 3-30, 5-1
freight	3-1, 3-17, 3-18, 3-42, 3-51, 3-62, 3-65, 4-40, 4-44

G

geologic hazards.....	4-187, 4-189
greenhouse gas (GHG)	1-5, 4-103, 4-104, 4-105, 4-106, 4-108, 4-110, 4-112, 4-114, 5-3
Growth Management Act (GMA).....	4-16, 4-21, 4-22, 4-189

H

hazardous materials.....	4-179, 4-180, 4-195, 4-196, 4-199, 4-200, 4-201, 4-202, 4-203, 4-204
highway beautification area	2-24, 4-7, 4-14, 4-74, 4-75, 4-76, 5-16
historic resources.....	4-3, 4-223, 4-225, 4-226, 4-227, 4-229, 4-233, 4-258, 4-259, 4-262, 4-266, 7-4, 7-12

I

Inadvertent Discovery Plan	4-234
interchange modifications	3-47, 4-4, 4-7, 5-7, 5-18
Interurban Trail.....	2-14, 2-25, 2-29, 3-15, 3-17, 3-53, 3-55, 4-63, 4-77, 4-90, 4-92, 4-93, 4-225, 4-248, 4-253, 4-254, 4-265, 4-268, 4-272, 4-273, 4-276, 4-277, 5-11, 7-6

J

Jackson Park Golf Course	2-18, 4-74, 4-82, 4-83, 4-168, 4-237, 4-238, 4-241, 4-242, 4-254, 4-265, 4-266, 4-269, 5-6

Appendix B

Glossary

APPENDIX B – GLOSSARY

Access Time. The time required to walk, bicycle, or drive from the origin of the trip (for example, from home) to a (boarding) transit stop, plus the waiting time based on the frequency of transit service, and/or the transfer time and the walking or driving time from the transit (de-boarding) stop to the destination. For automobile trips, it is the time required to walk to and from parking places, and delays within parking facilities, if any.

Accessibility. The ease by which an individual can reach desired activities in any location by use of the transportation system.

Air Pollutant. Smoke, dust, fumes, or odors in the ambient air that have the potential for harmful effects.

Alighting. Term describing the departure of passengers from a bus or transit vehicle.

Alignment. Horizontal geometric elements, which define the location of the light rail track or roadway.

Alluvium. An unconsolidated, terrestrial sediment composed of sorted or unsorted sand, gravel, and clay that have been deposited by water in streams, rivers, and creeks.

Annualized Capital Cost. A one-time capital cost converted into an annual value that incorporates both the depreciation on the capital item and the foregone interest on the money invested in the project.

Aquatic Resource. The physical elements of the aquatic environment, such as streams, rivers, lakes, and shorelands; as well as life forms such as aquatic plants and fish that live within the aquatic environment.

Aquifer. An underground layer of water-bearing permeable rock or unconsolidated materials (gravel, sand, or silt) from which groundwater can be extracted using a water well.

Area Source. A general classification of the origin of an air pollutant (e.g., park-and-ride lots are area sources of carbon monoxide emissions).

Arterial. A major thoroughfare used mainly for through traffic rather than access to adjacent property. Arterials generally have greater traffic-carrying capacity than collector or local streets and are designed for continuously moving traffic.

Artifact. Any portable object used and/or modified by civilization (particularly during prehistoric times).

At-Grade. Term used to express that a feature, such as a rail track or crosswalk, and a roadway meet at the same elevation.

At-Grade Crossing. Any intersection of two or more flows of traffic at the same elevation (possibly involving more than one mode of transportation), such as light rail/road crossings.

Attainment Area. An attainment area is an area considered to have air quality as good as or better than the national ambient air quality standards for specific pollutants as defined in the Clean Air Act.

Average Annual Megawatt. The average hourly demand for or supply of electricity measured in megawatts over a year.

Average Daily Traffic (ADT). The total volume of traffic during a given time period divided by the number of days in that time period, representative of average traffic in a 1-day time period.

Average Time (also, Exposure Time). The duration of exposure to a given concentration of an air contaminant, specified in the ambient air quality standards (e.g., the two national standards of 9 parts per million and 35 parts per million specify averaging times of 8 hours and 1 hour).

Average Wait Time. Average time spent by passengers at a station or bus stop waiting for transit service.

Average Weekday. A measurement of average conditions during one weekday, i.e., Monday through Friday.

A-Weighted Sound Level (dBA). To approximate the way humans interpret sound, a filter circuit with frequency characteristics similar to the human hearing system is built into sound measurement equipment. Measurements with this filter enacted are referred to as A-weighted sound levels, expressed in dBA (see Decibel).

Background Concentration. The pollutant level that would exist at a site in the absence of air pollution sources in the neighborhood of the site.

Baseline Energy Consumption. Energy consumption, usually for a no-build alternative, that is used as a reference against which energy consumption for a build alternative is compared.

Best Management Practices (BMPs). Approved physical, structural, and/or managerial practices that, when used singularly or in combination, prevent or reduce pollutant discharges.

Bioretention Facility. A shallow landscaped depression with an engineered soil mix designed to filter runoff from a small contributing area, which can be in the form of a swale or cell. It is commonly referred to as a rain garden.

Boarding. Term describing the arrival of passengers onto a bus or transit vehicle.

Boarding Trips. A trip on a transit line or group of lines where each boarding of a transit vehicle is considered the start of a new trip. Number of trips boarding (entering) transit vehicles, regardless of whether the trip involves a transfer from another transit vehicle. A fare may or may not be collected for each boarding trip, depending on whether a transfer is used.

British Thermal Unit (Btu). An energy unit equal to the quantity of heat required to raise the temperature of 1 pound of water 1 degree Fahrenheit.

Buffer. An area adjacent a critical area (e.g., wetland or stream) that functions to avoid loss or decline in ecological functions and values. In addition to preserving the ecological functions of a

wetland system, a buffer physically isolates a critical area from potential disturbance and harmful intrusion, and works to minimize risk to the public from loss of life, well-being, or property damage.

Capacity, Person. The maximum number of persons that can be carried past a given location during a given time period under specified operating conditions without unreasonable delay, hazard, or restriction (usually measured in terms of persons per hour).

Capacity, Roadway. The maximum hourly rate at which persons or vehicles can reasonably be expected to traverse a point or uniform section of a lane or roadway during a given time period under prevailing roadway and traffic conditions.

Capacity, Vehicle. The maximum number of vehicles that can be accommodated in a given time by a transit or highway facility.

Capital Costs. Non-recurring costs required to construct transit systems, including costs of right-of-way, facilities, rolling stock, power distribution, and the associated administrative and design costs, as well as financing charges during construction.

Carbon Monoxide (CO). A colorless, odorless, tasteless gas, and one of the U.S. Environmental Protection Agency's criteria air pollutants released from automobile exhaust.

Carpool. A group of passengers and drivers organized to use one automobile on a regular basis, riding together, for the same trip purpose (generally the work trip).

Census Tract. A census tract is a small subdivision of an urban area used by the U.S. Census Bureau to identify population and housing statistics. Census blocks are subdivisions of census tracts and are the smallest unit of census geography for which the Census Bureau collects data. The boundaries of census blocks are generally streets or other notable physical features and often correspond to a city block. A census block group is a combination of census blocks, typically encompassing two to four city blocks. The U.S. Census collects some information at the block level, some at the block group level, and some at the tract level.

Channelization. The use of traffic markings or islands to direct traffic into certain paths. For example, a "channelized" intersection directs portions of traffic into a left turn lane through the use of roadway islands or striping that separates the turn lane from traffic going straight.

Circulation. The free movement or passage of a vehicle, pedestrian, bicycle, or other transportation mode through a given area.

Concentration (also, level). A measure of the air pollutant in the ambient air, having the units of mass per volume.

Conformity (air quality). A process that ensures federal funding and approval goes to transportation activities consistent with federal air quality goals. The Federal Highway Administration and the Federal Transit Administration jointly determine that specific regions meet air quality standards.

Construction Staging Area. During construction, a site temporarily used for materials or equipment storage, assembly, or other temporary, construction-related activities.

Corridor. A general path from one point to another; the Lynnwood Link Extension study corridor begins in Northgate and travels north to Shoreline, Mountlake Terrace, and Lynnwood.

Criteria Air Pollutants. Those air pollutants that have been recognized by the U.S. Environmental Protection Agency as potentially harmful and for which standards have been set to protect the public health and welfare. The criteria air pollutants are carbon monoxide, sulfur dioxide, particulates, nitrogen dioxide, ozone, hydrocarbons, and lead.

Day Night Sound Level (Ldn). Ldn is a 24-hour equivalent continuous sound level (Leq), but with a 10-dB penalty assessed to noise events occurring at night. Nighttime is defined as 10 pm to 7 am. This strongly weights Ldn toward nighttime noise because most people are more easily annoyed by noise during the nighttime hours when background noise is lower and most people are sleeping.

dBA. The sound level obtained through the use of A-weighting characteristics specified by the American National Standards Institute (ANSI) Standard S1.4-1971. The unit of measure is the decibel (dB), commonly referred to as dBA when A-weighting is used. The “A” weighting scale closely resemble human response to noise.

Decibel. The unit used to measure the loudness of noise.

De Minimis Finding. De minimis is a Latin phrase meaning something of insignificance or negligible. De minimis impacts are defined as those elements that do not adversely affect the activities, features, and attributes of a Section 4(f) resource or property.

Dewatering. The temporary removal of ground or surface water from a construction area to allow construction to be done under dry conditions.

Displacement. A property acquisition that would require removing an existing use.

Disturbed Habitat. A habitat in which naturally occurring ecological processes and species interactions have been significantly disrupted by the direct or indirect results of human presence and activity.

Drop-Off Zone. A station that provides temporary loading and unloading facilities for automobiles and/or buses. The station may be combined with feeder bus stations, stations that provide lateral bus transportation service for riders to transfer to a light rail mode.

Ecologically Sensitive Area. An area, valued locally for its rare or sensitive habitat, existing in a relatively undisturbed, natural state and supporting indigenous species.

Elevated Guideway. A guideway that is positioned above the normal activity level (e.g., elevated structure for light rail to cross over a street).

Emission. Particulate, gaseous, noise, or electromagnetic byproducts of the transit system or vehicle.

Emission Control. Method by which emissions are governed in an effort to minimize pollutants and/or noise.

Emission Inventory. A listing by emission source of the amounts of air pollutants released into the atmosphere (generally, in tons or kilograms per day).

Emission Source. The origin of an air pollutant (e.g., automobiles and trucks are sources of carbon monoxide, hydrocarbons, and nitrogen oxides).

Emission Standards. A limitation on the release of an air contaminant into the ambient air (e.g., the federal government limits carbon monoxide, hydrocarbon, and oxides of nitrogen (NO_x) emissions per mile of travel in new automobiles).

Endangered Species. According to the Endangered Species Act of 1973, an endangered species is any species in danger of extinction throughout all or a significant portion of its range, other than an insect determined by the Secretary of the Interior to constitute a pest whose protection under the provisions of this act would present an overwhelming and overriding risk to man.

Equivalent Level (Leq). Leq is a measure of sound energy over a period of time. It is referred to as the equivalent sound level because it is equivalent to the level of a steady sound which, over a referenced duration and location, has the same A-weighted sound (dBA) energy as the fluctuating sound.

Express Service. Transit service where a very limited number of stops is made.

Facility. The means by which a transportation mode is provided. For example, a sidewalk is a facility for pedestrians as a highway is a facility for vehicles.

Fixed Guideway. A public transportation facility using a separate right-of-way for the exclusive use of public transportation or a system of vehicles that can operate on its own guideway constructed for that purpose (e.g., commuter rail, light rail).

Forest or Woodland Habitat. In the Puget Sound lowlands, a habitat type generally dominated by Douglas fir, western red cedar, and western hemlock, frequently with a hardwood understory. The ground cover is generally lush. Birds and small mammals abound, and larger mammals are common in large stands.

Frequency, Vehicle. Time rate of vehicle arrivals at a station stop or along a transit line.

Full Acquisition. The full parcel would be acquired and the current use would be displaced. Full acquisitions include parcels that might not be fully needed for the project but would be affected to the extent that current uses would be substantially impaired (e.g., loss of parking or access).

General Purpose Lane. Term used to describe a traffic lane on a highway that can be used by all types of vehicles including single-occupant automobiles, carpools, trucks, and motorcycles.

Glacial Till. This type of soil typically consists of a diverse mix of gravelly sand with scattered cobbles and boulders in a clay/silt matrix. It is very dense and is locally referred to as “hardpan.” The predominant glacial till encountered in the project area is Vashon-age glacial till.

Grade Separated. Parallel or crossing lines of traffic that are vertically or horizontally physically separated from each other and do not share a common intersection.

Greenhouse Gases (GHG). Greenhouse gases include carbon dioxide (CO₂), methane (CH₄), ozone (O₃), water vapor, nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF₆). These gas emissions are collectively leading to the greenhouse effect, trapping the sun's solar rays and leading to an increase in Earth temperature.

Groundborne Noise. Noise that is transmitted through the ground, typically reported in decibels.

Groundborne Vibration. A small but rapidly fluctuating motion transmitted through the ground, typically reported as velocity or acceleration.

Guideway. Specifically designed way traversed by transit vehicles constrained to the way (see Elevated Guideway).

Habitat Function. Terrestrial plant communities, wetlands, and aquatic systems such as streams provide a variety of functions in the environment. For instance, depending on the condition and location of a wetland, wetland functions might include water quality improvement, groundwater recharge, nutrient and sediment filtering, and habitat for a variety of animals, as well as education and recreation opportunities for people—the habitat function is one of several functions potentially performed by wetlands. Similarly, terrestrial and aquatic systems each also may perform many functions. When they provide habitat for animals, they are said to be performing or providing a “habitat function.”

Habitat Value. The value of a plant community's function as determined by the habitat's ability to support the needs of biological species. High-value habitats are those that support or may support threatened, endangered, and/or sensitive species as determined by federal, state, and local jurisdictions.

Hazardous Materials. Hazardous materials are materials, which, because of their chemical, physical, or biological nature, pose a potential risk to life, health, or property when released. Such materials include hazardous waste, dangerous waste, hazardous substances, and toxic substances.

Headway. The headway between vehicles in public transit systems is the amount of time (usually in minutes) that elapses between two vehicles passing the same point traveling in the same direction on a given route.

High-Capacity Transit. A system of public transportation services within an urbanized region operating principally on exclusive rights-of-way; examples include light rail transit or express buses on exclusive bus ways and their supporting services.

High-Occupancy Vehicle (HOV). Any passenger vehicle that meets or exceeds a certain predetermined minimum number of passengers, for example, more than two or three people per automobile. Typically includes carpools with two or more people, vanpools, and buses.

Hours of Service. The number of hours during the day between the start and end of service on a transit route, also known as the service span.

Indirect Energy. A term used to denote all energy inputs for the construction, operation, and maintenance of a system.

Indirect Source. An entity that does not directly emit pollutants but attracts emission sources such as automobiles and trucks. Shopping centers, stadiums, and highways are examples of indirect sources.

Integration with Other Modes. Method by which a transit system interfaces with other modes of transportation.

Interchange. The system of interconnecting ramps between two or more intersecting roadways or guideways that are grade separated.

Interim Terminus. A station where the project would operate until the next portion of the project can be built. The terminus would typically include a station with tail tracks extending beyond the station for layover of trains.

Kilowatt (kW). A unit of electrical energy.

Kilowatt-hour (kWh). One kilowatt of energy used over one hour.

Land Development Pattern. The use, types, and intensity of development. Land development patterns affect trip demand, average trip length, and, therefore, energy consumption.

Landscaped Habitat. A habitat in urban areas having limited native species. Vegetation generally consists of mowed lawns and exotic trees and bushes.

Ldn. The day/night average noise level.

Leq. The equivalent steady-state sound level that, in a specified time period, would contain the same acoustic energy as the varying sound level during the same period; considers volume capacity, travel speeds, and delay.

Leq(h). The hourly value of Leq.

Level of Service (LOS). A qualitative measure that represents the collective factors of travel under a particular volume condition. A measure of traffic congestion.

Light Rail Transit (also Light Rail). A mode of mass transportation comprising light rail vehicles, which travel on steel tracks and are powered by electricity from overhead wires. This mode is characterized by its ability to operate in at-grade and/or grade-separated environments.

Link. Sound Transit's light rail system.

Liquefaction. Conversion of soil into a fluid-like mass during an earthquake or other seismic event.

Load Factor. The average ratio of passengers to seats, during a specified period of operation of a public transit route.

Local Service. A type of transit operation involving frequent stops and consequent low speeds, the purpose of which is to deliver and pick up transit passengers as close to their destinations or origins as possible.

Locally Preferred Alternative. Following the publication of the Draft EIS, the Sound Transit Board identifies a preferred alternative consisting of routes and station preferences. This is known as

a “locally” preferred alternative because the Federal Transit Administration has not yet selected a preferred alternative.

Low Income. A person whose median household income is at or below the U.S. Department of Health and Human Services poverty guidelines.

Low Income Population. Any readily identifiable group of low-income persons who live in geographic proximity, and, if circumstances warrant, geographically dispersed/transient persons (such as migrant workers or Native Americans) who will be similarly affected by the project.

Maintenance Area. Maintenance areas are geographic areas with a history of non-attainment of National Ambient Air Quality Standards (NAAQS) but which now consistently meet NAAQS.

Median Alignment. In rail operations, a type of alignment where tracks are positioned in the median on the street, as opposed to being positioned on one side of the street.

Megawatt (MW). 1,000,000 watts.

Microgram per Cubic Meter ($\mu\text{g}/\text{m}^3$). A unit of concentration equal to one thousandth of a gram per cubic meter.

Minimum Turn Radius. Generally assumed to be the minimum horizontal turn radius (tightest curve).

Minority. A person who is:

- Black - A person having origins in any of the black racial groups of Africa;
- Hispanic or Latino - A person of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin, regardless of race;
- Asian - A person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent;
- American Indian or Alaskan Native - A person having origins in any of the original people of North or South America, including Central America, and who maintains cultural identification through tribal affiliation or community recognition; or
- Native Hawaiian or Other Pacific Islander - A person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands.

Minority Population. Any readily identifiable groups of minority persons who live in geographic proximity, and if circumstances warrant, geographically dispersed/transient persons (such as migrant workers or Native Americans) who will be similarly affected by the project.

Mobility. The ease of continuous movement along the transportation system.

Mode. A particular form or method of travel, such as pedestrian, bicycle, automobile, bus, or light rail.

Mode Share. The percentage of travelers that travel either by single-occupancy vehicle, high-occupancy vehicle, or transit modes on a given roadway facility.

Mode Split. Forecast of proportion of total person trips that would use each of the various modes of transportation that include transit and cars.

Model Toxics Control Act (MTCA). The Model Toxics Control Act Cleanup Regulation, WAC 173-340, implements the Model Toxics Control Act, RCW 70.105D, which addresses strict requirements for site discovery and reporting, site assessments, and site remediation. Most important, the regulation defines standard methods used to assess whether a site is contaminated or clean.

National Ambient Air Quality Standards (NAAQS). Federal limits on levels of atmospheric contamination necessary to protect the public from adverse effects on health (primary standards) and welfare (secondary standards).

National Historic Preservation Act of 1966 (NHRA). The Act that established the National Register of Historic Places and State Historic Preservation program and set forth guidelines and regulations for environmental review of projects involving federal funding.

National Register of Historic Places (NRHP). The official list of the nation's cultural resources determined to be worthy of preservation; the register is maintained by the National Park Service.

Network. A system of real or hypothetical interconnecting links that forms the configuration of transit routes and stops comprising the total system.

New Starts. A federal funding program administered by the Federal Transit Administration. Section 5309 New Starts funds are discretionary federal funds available for new fixed guideway systems and extensions to existing systems.

Noise Wall. A noise barrier (also called a sound wall) that is an exterior structure designed to protect inhabitants of sensitive land use areas from noise pollution. Noise walls are considered the most effective method of mitigating roadway, railway, and industrial noise sources.

Nonattainment Area. An area designated by the U.S. Environmental Protection Agency as currently violating the National Ambient Air Quality Standards, based on archival air quality data.

NO_x. Oxides of nitrogen (nitrogen oxide and nitrogen dioxide). The pollutants released during high-temperature combustion of fossil fuels such as diesel.

Off-Peak. Those periods of the day when demand for transit service is not at a maximum.

Operating Costs. Recurring costs incurred in operating transit systems, including wages and salaries, maintenance of facilities and equipment, fuel, supplies, employee benefits, insurance, taxes, and other administrative costs. Amortization of facilities and equipment is not included.

Operating Revenue. The gross income from operation of the transit system including fares, charter income, concessions, advertising, etc. Does not include interest from securities, non-recurring income from sale of capital assets, etc.

Operational Energy. The energy used for vehicle propulsion, facilities, and maintenance for a specified period, usually one year.

Originating Ride (or Trip). A one-way trip taken on a transit line or group of lines, where a transfer from one line to another is not considered to be the start of a new trip.

Overhead Catenary. The system of electrical transmission wires suspended over the track to supply power for the light rail vehicles.

Ozone. A gas consisting of three oxygen atoms formed in reactions of non-methane hydrocarbons and nitrogen oxides in the presence of sunlight. Ozone is one of the U.S. Environmental Protection Agency's criteria air pollutants.

Palustrine Wetland. Freshwater wetlands dominated by trees, shrubs, and emergent vegetation.

Park-and-Ride Lot. A lot that provides parking for patrons of a transit facility.

Parking Utilization. The number of parking spaces being utilized at a given location; it is calculated as the total number of parking spaces occupied divided by the total parking supply at a given location.

Partial Acquisition. Part of a parcel would be acquired, but the current use generally would not be displaced. In some instances, such as larger parcels that hold multiple uses, a business or residential unit on a parcel could be displaced, but most uses would remain.

Particulate Matter. A mixture of extremely small particles and liquid droplets that is made up of a number of components, including acids (such as nitrates and sulfates), organic chemicals, metals, and soil or dust particles. U.S. Environmental Protection Agency is concerned about particles that are 10 micrometers in diameter or smaller because those are the particles that generally pass through the throat and nose and enter the lungs.

Passenger Load/Passenger Load LOS. The number of passengers on a transit unit (vehicle or train) at a specified point.

Patronage. The number of person-trips carried by a transit system over a specified time period.

Peak Hour. The hour of the day in which the maximum demand for service is experienced, accommodating the largest number of automobile or transit patrons.

Peak Particle Velocity (PPV). Specifications for allowable levels of vibration from blasting, pile driving, and other construction processes with the potential of causing building damage are almost always expressed in terms of peak particle velocity because this is thought to be well correlated with maximum stresses in buildings. Peak particle velocity is the instantaneous positive or negative peak in the vibration signal.

Peak Period. A time period or periods when travel activity is at its heaviest.

Pedestrian Level of Service (LOS). An overall measure of walking conditions on a route, path, or facility.

Person Demand. The number of persons that use a specific roadway or highway facility, thus creating a demand for usage of the facility; it is often compared to roadway capacity to determine the level of congestion.

Person Throughput. The amount of persons that can pass a point on a roadway or pass through an intersection over a specified period of time.

Person Trip. A trip from a point of origin to a destination made by a person by any travel mode. Within transit, transfers are not counted. That is, a person traveling from home to work on a bus with one transfer creates only one-person trip.

Point Source. A general classification of the origin of an air or water pollutant, usually characterized as smokestacks or outfalls.

Pollution-Generating Impervious Surface (PGIS). Impervious surfaces considered to be a significant source of pollutants in stormwater runoff. Such surfaces include those subject to vehicular use, industrial activities (as defined in Washington State Department of Ecology's Stormwater Management Manual), or storage of erodible or leachable materials, wastes, or chemicals, and which receive direct rainfall or the run-on or blow-in of rainfall.

Polychlorinated Biphenyls (PCBs). Hazardous environmental pollutants upon which the federal government has placed additional controls regulating disposal.

Potentially Affected Area. This is defined differently by each technical discipline. It includes the area that could be affected by the light rail alternatives.

Poverty-Level Household. As used for the 2000 U.S. Census data, the average poverty threshold for a family of four persons was \$17,603 in 2000. The defined family poverty level threshold varied by total number of family members, number of children under 18 years, and number of persons over age 65. For a detailed discussion of the poverty definition, see U.S. Bureau of the Census, *Current Population Reports, Series P-60, No. 171, Poverty in the United States: 1988 and 1989*.

Preferred Alternative. Following publication of the Draft EIS, the Sound Transit Board identifies a Preferred Alternative, including route and station options. The Final EIS will further evaluate the Preferred Alternative as well as other alternatives.

Queue. A line of vehicles, bicycles, or persons waiting to be served by the system in which the flow rate from the front of the queue determines the average speed within the queue. Slowly moving vehicles or people joining the rear of the queue are usually considered part of the queue. The internal queue dynamics can involve starts and stops.

Recessional outwash. Sediment deposited by meltwater streams flowing away from a retreating glacier during the last episode of glaciation.

Reliability. How often transit service is provided as promised; affects waiting time, consistency of passenger arrivals from day to day, total trip time, and loading levels.

Right-of-Way. The corridor (horizontal and vertical space) owned by the transit agency for the transportation way.

Riparian Habitat. A habitat type associated with stream or river margins and characterized by dense vegetation consisting primarily of willow, alder, and cottonwood species, supporting a wide variety of waterfowl, songbirds, amphibians, and small mammals.

Route. The course followed by a transit vehicle as a part of the transit system.

Runoff. The rainwater that directly leaves an area in surface drainage, as opposed to the amount that seeps out as groundwater.

Screenline. A screenline is an imaginary line across a section of freeways or arterials. Screenlines are often used in traffic analyses to determine how much volume is entering or exiting a particular area.

Section 106. Section 106 of the National Historic Preservation Act of 1966 established a procedure to review the potential effects on cultural resources by projects that involve a federal action.

Section 4(f). Section 4(f) of the U.S. Department of Transportation Act restricts the United States Department of Transportation's approval of projects affecting the following properties: publicly owned land from a public park, recreation area, or wildlife and waterfowl refuge, or any land from a significant historic site.

Section 401. Section 401 of the Clean Water Act is a certification program administered by the Washington Department of Ecology under guidelines of the U.S. Environmental Protection Agency to ensure projects applying for a Section 404 permit comply with state water quality standards and other requirements of the state law.

Section 404. Section 404 of the Clean Water Act is a permit program administered by the U.S. Army Corps of Engineers under guidelines by the U.S. Environmental Protection Agency to protect the nation's waters from dredged and fill sources.

Section 6(f). Section 6(f) of the Land and Water Conservation Act of 1965 established restrictions on, and replacement requirements for, the use of land acquired with funds authorized under the Land and Water Conservation Fund Act.

Segment. Refers to the three geographic sections of the Lynnwood Link Extension (A, B, and C) in which the proposed alternatives reside, as defined in Chapter 2 of the EIS.

Sensitive Receptor (Auditory). A local area or site that supports activities easily disrupted by audio intrusions or distractions, such as a school, historic landmark, or residential neighborhood.

Sensitive View. A view that is identified by local jurisdictions as requiring protection.

Sensitivity Analysis. A “what-if” type of analysis to determine the sensitivity of the outcomes to changes in parameters; if a small change in a parameter results in relatively large changes in the outcomes, the outcomes are said to be sensitive to that parameter.

Service Frequency. The number of transit units (vehicles or trains) on a given route or line, moving in the same direction, that pass a given point within a specified interval of time, usually 1 hour.

Side-Track Alignment. In rail operations, a type of alignment where the tracks are positioned on one side of the street, as opposed to being positioned in the median of the street.

Signal Phasing. A group of three traffic-signal timed intervals (green, yellow, red) that are assigned to an independent traffic movement or combination of movements.

Social Interaction. Intra-neighborhood communication and circulation using street, sidewalk, and bikeway connections between residential areas and community facilities, retail businesses, and employment centers. Also includes verbal interaction and telecommunications facilities.

Sounder. Sound Transit's commuter rail system, which travels from Everett to Lakewood, through Seattle.

Sound Transit 2 (ST2). A package of high-capacity transit investments in the regional transit system, adopted by the Sound Transit Board in July 2008, which included light rail as the mode choice for the project corridor. ST2 includes a major expansion of the Link light rail system. ST2 would extend light rail from North Seattle into Snohomish County, across Lake Washington into East King County, and south of Sea-Tac International Airport to Federal Way.

Staging Area. Section of land near a construction site designated for equipment and truck storage, maintenance, and warm-up prior to engagement in construction activities.

State Implementation Plan (SIP). A plan required of each state by the Clean Air Act that describes how the state will attain and maintain the National Ambient Air Quality Standards.

Stormwater. Stormwater is rain and snow melt that runs off surfaces such as rooftops, paved streets, highways, and parking lots. As water runs off these surfaces, it can pick up pollution.

Stormwater Detention. The temporary storage of stormwater runoff and subsequent release at a slower rate.

Stormwater Treatment. Stormwater ponds and underground vaults are used to remove sediments and dissolved metals from stormwater. They collect sediments on the bottom of the pond or vault, where maintenance workers can clean them out on a regular basis.

Subarea. A unique portion of the Regional Transit Authority taxing district, one of five as defined in *Sound Move* (Snohomish County, North King County, East King County, South King County, and Pierce County).

Subduction Zone. An area where one crustal plate is descending below another. The Puget Sound area is close to a subduction zone, which is formed by the Juan de Fuca plate descending below the North American plate. This action can cause significant seismic activity.

Terminal. The terminating point of transportation routes with transfer facilities and, often, amenities for passenger convenience.

Terminus. A transit station located at the end of a transit (including light rail) line.

Threatened Species. According to the Endangered Species Act of 1973, any species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range.

Title 23, Code of Federal Regulations, Part 771 (23 CFR Part 771) (Revised 1987). Federal Highway Administration and Federal Transit Administration regulations governing the preparation of environmental impact statements and related documents.

Total Maximum Daily Loads (TMDL). For 303(d)-listed water bodies, TMDLs are developed by the Washington State Department of Ecology for the pollutants that exceed water quality standards as a means for ultimately attaining the standards.

Till. A poorly sorted, gravel-like deposit of sediment that is left behind by a glacier, which does not show stratification. Till is sometimes called boulder clay because it is composed of clay, boulders of intermediate sizes, or a mixture of these.

Total Suspended Particulates (TSP). Air pollutants that consist of solid particles (dust, lead, salts, etc.) suspended in the atmosphere. TSP is a U.S. Environmental Protection Agency's criteria air pollutant.

Total Travel Time. The total elapsed time between the beginning and ending of a trip, including travel, terminal, and waiting time.

Traction Power Substation (TPSS). An electrical station that provides the power needed to drive the trains. The substations are housed in either standalone structures, or within transit stations, typically within or adjacent to the right-of-way. The substations would typically be built about 1.5 miles apart.

Transfer Ratio. The number of boarding trips divided by originating trips.

Transfer Time. The elapsed trip time required to change between modes (e.g., bus to light rail) or to transfer between routes of the same mode (e.g., bus to bus).

Transfer. The portion of a trip between two connecting transit lines, both of which are used for completion of the trip.

Transit. A transportation system principally for moving people in an urban area and made available to the public usually through paying a fare.

Transit Center. A station with shelters where a large number of transit vehicles and passengers can be brought together with safety and convenience.

Transit-Oriented Development. The Transportation Research Board provides several definitions of transit-oriented development that emphasize high-quality walking environments, mixed land uses, and high-density developments linked to transit. Generally, transit agencies agree that what constitutes a transit-oriented development is a pattern of dense, diverse, pedestrian-friendly land uses near transit nodes that, under the right conditions, translates into higher transit patronage.

Transit Service Reliability. Reliability is defined as the degree to which transit service can be counted on for consistent, on-time performance.

Transit Street Classification System. The City of Seattle's system for designating certain streets as being important for transit. This is part of the city's overall street classification system.

Transportation Corridor (also, Corridor). The group of travel movements (or travel flows) between two or more locations. A corridor might have components or subcorridors. A corridor

includes all facilities, transit and highway, that might be used to accommodate the specified travel movement.

Transportation Systems Management (TSM). Incorporates relatively low-cost approaches to improving mobility without constructing major new transportation facilities. TSM generally emphasizes smaller physical improvements and operational changes such as intersection improvements, minor widenings, traffic engineering actions, operational changes such as queue jumps or queue bypass lanes for buses, expanded bus service, transit centers, and improved transit access.

Travel Time (in vehicle). The time required to travel between two points, not including terminal or waiting time.

Trip. The one-way movement of one person between the origin and the destination, including transfers, and the walk distance to and from the means of transportation.

Trip Demand. The number and type (public or private origin and destination) of trips measured, calculated, or forecasted in a specified area having a given land development pattern. Trip demand also depends on prevailing economic, behavioral, and attitudinal conditions.

Trip Length. The number of miles per trip. This is usually an average number for a specified trip type, area, and analysis year.

Turn Pocket. Term used to describe a traffic lane that separates turning vehicles from through lanes. For example, a left-turn pocket is also commonly known as a left-turn lane.

Unity. In visual analysis, the visual coherence and compositional harmony of the landscape.

Use of Section 4(f) Land. According to regulations of the U.S. Department of Transportation, use of Section 4(f) land is defined as: (1) acquisition of title or easement to land, or (2) in unusual circumstances, serious indirect impacts, such as increase in noise, visual intrusion, or access obstruction.

Vehicle Hours of Travel (VHT). The total vehicle hours expended traveling on the roadway network in a specified area during a specified time period.

Vehicle Mile. The amount of travel equivalent to one vehicle traveling one mile.

Vehicle Miles of Travel (VMT). The total number of vehicle miles traveled within a specific geographic area over a given period of time.

Vehicle Occupancy. The number of persons per vehicle. Usually an average number for a specified trip type, area, and analysis year.

Vehicle Throughput. The number of vehicles, usually on a highway, that get through a screenline over a short time period such as an hour.

Vibration Velocity. Vibration velocity is the basic measure of groundborne vibration. It is a measure of the rate at which particles in the ground are oscillating relative to the equilibrium point.

Vibration Velocity Level. It is generally accepted that, over the frequency range important for groundborne vibration from transit systems, human response to vibration is best correlated to the root mean square (rms) vibration velocity. In this EIS, rms vibration velocity is always expressed as decibels relative to 1 micro-inch per second.

Viewer Sensitivity. The extent of the viewer's concern for a particular view or viewshed. Viewer sensitivity to the viewed environment is classified as low, average, or high.

View. A scene observed from a given vantage point.

Viewshed. An area of land, water, or other environmental element that is visible to the human eye from a fixed vantage point.

Visual Character. Refers to identifiable visual information, including visual elements and major environmental features.

Visual Encroachment. The imposition of an object, or objects, on a view such that the view is disrupted, obstructed, or otherwise modified from its original state.

Visual Quality. Refers to the evaluation of the visual experience to the public and is described in terms of vividness, intactness, and unity. *Vividness* refers to the way landscape components combine in distinctive and memorable visual patterns. *Intactness* refers to whether the natural and human-built visual patterns form a consistent landscape, or whether highly contrasting features intrude into the view. *Unity* refers to the visual coherence and compositional harmony of the landscape considered as a whole. Visual quality is an assessment of the visual character and is categorized as low, medium, or high, as follows:

Low Visual Quality. Views that lack a dominant visual character in which there is a low level of fit between disparate elements. In some cases, these views appear disorganized with features that seem out of place, or are views with some compositional harmony but include eyesore elements that can dominate one's perception.

Medium Visual Quality. Views with a unity or compositional harmony between elements of the landscape that produce a pleasing overall impression in which encroaching elements are minor and do not substantially alter the perception of the landscape as a unit. These views lack vivid, memorable features and are generally characterized as common or ordinary.

High Visual Quality. Views with vivid, memorable, distinctive features in a landscape with compositional harmony or that fit between elements of the landscape that is free from encroaching elements.

Volume to Capacity (v/c) Ratio. The ratio of demand flow rate to capacity for a highway or arterial facility; a v/c ratio below 1.0 means that traffic volumes are below the capacity of the roadway, when identified as greater than 1.0, the traffic volume has theoretically exceeded the carrying capacity of the roadway.

Washington State Department of Ecology 303(d) List. The federal Clean Water Act (CWA), adopted in 1972, requires states to restore their waters to be “fishable and swimmable.” The CWA established a process to identify and clean up polluted waters. Every 2 years, all states are required to prepare a list of water bodies that do not meet water quality standards. This list is called the 303(d) list because the process is described in Section 303(d) of the CWA.

Appendix C

Environmental Justice Analysis

APPENDIX C – ENVIRONMENTAL JUSTICE ANALYSIS

C.1. INTRODUCTION

This appendix describes the analysis and public outreach conducted to identify potential environmental justice issues related to the construction and operation of the Lynnwood Link Extension. Environmental justice has been addressed in compliance with Presidential Executive Order 12898, Federal Actions to Address Environmental Justice to Minority Populations and Low-Income Populations (February 11, 1994); the U.S. Department of Transportation (USDOT) Order 5610.2, Actions to Address Environmental Justice in Minority Populations and Low-Income Populations (April 15, 1997); and the USDOT Order 5610.2(a) (May 2, 2012) updating the USDOT policy to consider environmental justice principles in all programs, policies, and activities. The environmental policies of the USDOT agencies, including the Federal Transit Administration (FTA), are summarized below. The agencies are to:

1. Avoid, minimize, and mitigate disproportionately high and adverse effects on minority and low-income populations.
2. Ensure full and fair opportunities for public involvement by members of minority and low-income populations during the planning and development (including the identification of potential effects, alternatives, and mitigation measures).
3. Prevent the denial of, reduction in, or significant delay in the receipt of benefits by minority and low-income populations.

FTA environmental justice policy guidance (FTA Circular C 4703.1) defines a disproportionately high and adverse effect as one that:

- Is predominantly borne by a minority or low-income population, or
- Will be suffered by the minority population and/or low-income population and is appreciably more severe or greater in magnitude than the adverse effect that will be suffered by the non-minority population and/or non-low-income population.

The USDOT Order also provides guidance that “In making determinations regarding disproportionately high and adverse effects on minority and low-income populations, mitigation and enhancement measures that will be implemented and all offsetting benefits to affected minority and low-income populations may be taken into account, as well as the design, comparative impacts, and the relevant number of similar existing system elements in non-minority and non-low-income areas” (USDOT 5610.2(a) Section 8(b)).

Under USDOT Order 5610.2(a), a minority person includes persons who meet the following criteria:

- Black or African American (a person having origins in any of the Black racial groups of Africa)
- Asian American (a person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent)
- American Indian and Alaskan Native (a person having origins in any of the original people of North and South America [including Central America], and who maintains cultural identification through tribal affiliation or community recognition)
- Native Hawaiian and Other Pacific Islander (a person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands)
- Hispanic or Latino (a person of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin, regardless of race)

The USDOT Order 5610.2 and FTA Circular C 4703.1 further define a minority or low-income population as any readily identifiable group or groups of minority or low-income persons who live in geographic proximity, or if circumstances warrant, geographically dispersed or transient persons...who will be similarly affected by a proposed Department of Transportation project, policy, or activity.

A low-income person is identified as:

- A person whose median household income is at or below the Department of Health and Human Services poverty guidelines

The U.S. Census Bureau updates poverty thresholds each year for use by the Department of Health and Human Services using the change in the average annual Consumer Price Index for All Urban Consumers. As such, separate poverty guidelines do not exist for different regions, states, counties, or cities in the United States.

The Lynnwood Link Extension would traverse the cities of Seattle and Shoreline in King County, and Mountlake Terrace and Lynnwood in Snohomish County. As of 2010, nearly 126,000 residents and an estimated 60,000 jobs were located in census tracts within 0.5 mile of the project corridor, which is anchored by major regional commercial centers at Northgate and Lynnwood. With preparation of the Lynnwood Link Extension *Alternatives Analysis Report and SEPA Addendum* (Sound Transit 2011a), Sound Transit's research has shown that neighborhoods in the project corridor have higher percentages of minority persons than the Sound Transit service district for the urbanized Snohomish, King, and Pierce counties. The occurrence of low-income populations in the corridor is similar to the Sound Transit service district. These demographic characteristics are presented in the *Title VI*

Demographic and Service Profile Maps and Charts (Sound Transit 2013). Attachment C-1 briefly describes the 18 neighborhoods that are adjacent to the project corridor. Attachments C-2 through C-12 provide demographic characteristics of the study area, and Attachment C-13 describes station access to nearby community facilities.

The following sections are provided in the rest of this appendix:

Section C.2, Regulatory Framework

Section C.3, Methodology and Approach

Section C.4, Minority and Low-income Populations

Section C.5, Outreach to Minority and Low-income Populations

Section C.6, Environmental Justice Analysis

Section C.7, Conclusions

Section C.8, References

C.2. REGULATORY FRAMEWORK

The analysis of potential impacts on minority and low-income populations was prepared following the federal, state, and regional government regulations, policy, and guidance listed below:

Federal

- Title VI of the Civil Rights Act of 1964
- Age Discrimination Act of 1975
- Americans with Disabilities Act of 1990 (ADA)
- Federal Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended
- Presidential Executive Order 12898—Federal Actions to Address Environmental Justice to Minority Populations and Low-Income Populations
- Presidential Executive Order 13166—Improving Access to Services for Persons with Limited English Proficiency
- U.S. Department of Transportation Order 5610.2—Order to Address Environmental Justice in Minority Populations and Low-Income Populations
- Title 42 United States Code (USC) Section 4601, Federal Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended
- Title 49 of the Code of Federal Regulations (CFR) Part 21, Nondiscrimination in Federally Assisted Programs of the Department of Transportation, Effectuation of Title VI of the Civil Rights Act of 1964
- USDOT FTA, Circular FTA C 4702.1B, Title VI Requirements and Guidelines for Federal Transit Administration Recipients (October 1, 2012)
- USDOT FTA, Final Circular FTA C 4703.1, Environmental Justice Policy Guidance for FTA Recipients (August 15, 2012)
- Community Impact Assessment: A Quick Reference for Transportation, Publication No. FHWA-PD-96-036 (September 1996)

State of Washington

- Washington Relocation Assistance—Real Property Acquisition Policy Act of 1971, as amended
- Governor's Executive Order 93-07, Affirming Commitment to Diversity and Equity in the Service Delivery and in the Communities of the State

Sound Transit

- Sound Transit/Washington State Department of Transportation (WSDOT)/Federal Highway Administration (FHWA)/FTA Environmental Action Team Issue Paper No. 36, Implementing Environmental Justice Pursuant to Executive Order 12898 and the Department of Transportation Order to Address Environmental Justice in Minority Populations and Low-Income Populations (October 4, 2001)
- Sound Transit Resolution 98-20-1: A resolution of the Board of the Central Puget Sound Regional Transit Authority adopting revised Real Property Acquisition and Relocation Policies, Procedures and Guidelines and superseding Resolution 98-20 (Adopted November 14, 2002)

C.3. METHODOLOGY AND APPROACH

For the analysis of potential impacts, Sound Transit identified a study area that extends 0.5 mile from the project alternative alignments. This area includes neighborhoods adjacent to the project corridor, but their boundaries may extend beyond 0.5 mile from the alternatives. The 0.5-mile area of effect is consistent with the project's transportation analysis and it encompasses the study areas used for other environmental topics covered in the Final Environmental Impact Statement (Final EIS).

C.3.1 Data Sources

Sound Transit used existing reports and documentation to develop the discussion of the affected environment. Much of this information was obtained from local, state, and federal agency Web pages. The following is a list of the key data sources used in the analysis:

- U.S. Census Bureau 2010 decennial census data on racial and ethnic minority populations, household types, and age, as well as basic information about housing in adjacent neighborhoods and within 0.5 mile of the alternative alignments and stations
- U.S. Census Bureau 2006–2010 American Community Survey data on languages spoken at home, limited English proficiency, country of origin of persons born outside of the United States, transit-dependency, and low-income populations for adjacent neighborhoods and populations within 0.5 mile of the alternative alignments and stations
- Washington State Office of the Superintendent of Public Instruction demographic statistics, enrollment in transitional English language programs, and participation in the federal free or subsidized lunch program for elementary school attendance in areas located wholly or partially within 0.5 mile of the project corridor
- Information about existing and planned low-income housing projects within about 0.5 mile of the project corridor from study area public housing authorities (Seattle Housing Authority, King County Housing Authority, Senior Services of Snohomish County, and Snohomish County Housing Authority)
- Location of community facilities within about 0.5 mile of the project corridor from local government Web pages as well as other Internet sites
- Information about other baseline environmental conditions from project technical analysts for transportation; land use; economics; noise and vibration; air quality and greenhouse gases; visual and aesthetics; public services, safety, and security; and parks and recreational resources

- Conceptual horizontal and vertical alignment and engineering drawings for project alternative alignments and stations from the project design engineers

Based on the U.S. Census Bureau data, minority or low-income populations were identified within 0.5-mile buffer areas or within census geographies. For reference, the 2013 Sound Transit Title VI Demographic and Service Profile Maps and Charts document shows the Sound Transit district averages are 31.13 percent minority and 11.24 percent low income. The analysis also identified more localized areas where low-income or minority populations were present, based on a combination of census information, field evaluation and community outreach. This combination of sources reflects federal environmental justice guidance highlighting the need to consider impacts on minority and low-income populations, regardless of size.

As described in Section C.5, Outreach to Minority and Low-income Populations, Sound Transit also contacted agencies, groups, and individuals as part of the project's public involvement program, and received information on the project corridor neighborhoods, historic development, demographics, and community character and resources. This information helped to identify community values, needs, and key activity centers.

C.3.2 Impact Assessment and Potential Mitigation

In Chapter 5, Section E of FTA Circular C 4703.1 (August 15, 2012), FTA recommends National Environmental Policy Act (NEPA) environmental documents include the following in their environmental justice analysis:

- A. A description of the low-income and minority populations within the study area affected by the project, if any, and a discussion of the method used to identify them.
- B. A discussion of all adverse effects of the project both during and after construction that would affect the identified minority and low-income populations. A description of the project's mitigation and environmental enhancement actions that will avoid or minimize potential effects (e.g., relocation program that go beyond the Uniform Relocation Act and address adverse community effects such as separation or cohesion; measures to replace community resources removed by the project).
- C. A discussion of the remaining effects, if any, and why further mitigation is not proposed.
- D. A discussion of all positive effects for the identified minority and low-income populations, such as an improvement in transit service, mobility, or accessibility.

- E. For projects that travel through predominately minority and low-income and predominately non-minority and non-low income areas, a comparison of mitigation and environmental enhancement actions that could affect these different populations.

The analysis of potential disproportionately high and adverse effects on minority and low-income populations considers the No Build Alternative and the light rail alternatives. Direct construction and long-term effects, indirect and secondary effects, and cumulative effects were examined for all elements of the environment. The analysis also examined project benefits accruing to minority and low-income populations, which may offset effects that could not be avoided or otherwise mitigated. The primary sources for this analysis were the technical reports and the Draft and Final EIS sections prepared for transportation and other environmental elements. The analysis also considered public comments Sound Transit and FTA received on the Draft EIS, as well as information Sound Transit received through its outreach and public involvement program, which included notices to potentially affected property owners.

The effects of each environmental element were reviewed to determine if the alternatives would result in adverse effects notwithstanding proposed mitigation measures. Project impacts that were effectively mitigated would not cause disproportionately high and adverse effects.

C.4. MINORITY AND LOW-INCOME POPULATIONS

This section describes the presence of racial and ethnic minority populations as well as low-income populations in the project corridor's adjacent neighborhoods and populations within 0.5 mile of the alternatives.

C.4.1 Study Area

The study area comprises 18 neighborhoods adjacent to the project corridor (Figure C-1). Except for the Hazelwood neighborhood, they are officially designated by local governments, primarily for planning purposes. Many also have active community councils or recognized neighborhood contacts. As shown in Figure C-1, ten neighborhoods in Seattle and Shoreline are adjacent to Segment A, eight neighborhoods are adjacent to Segment B, and three are adjacent to Segment C. An estimated 126,000 residents live in the project corridor based on 2010 census tracts within 0.5 mile of the project corridor. Attachment C-1 contains brief land use, character, and demographic statistics for each neighborhood.

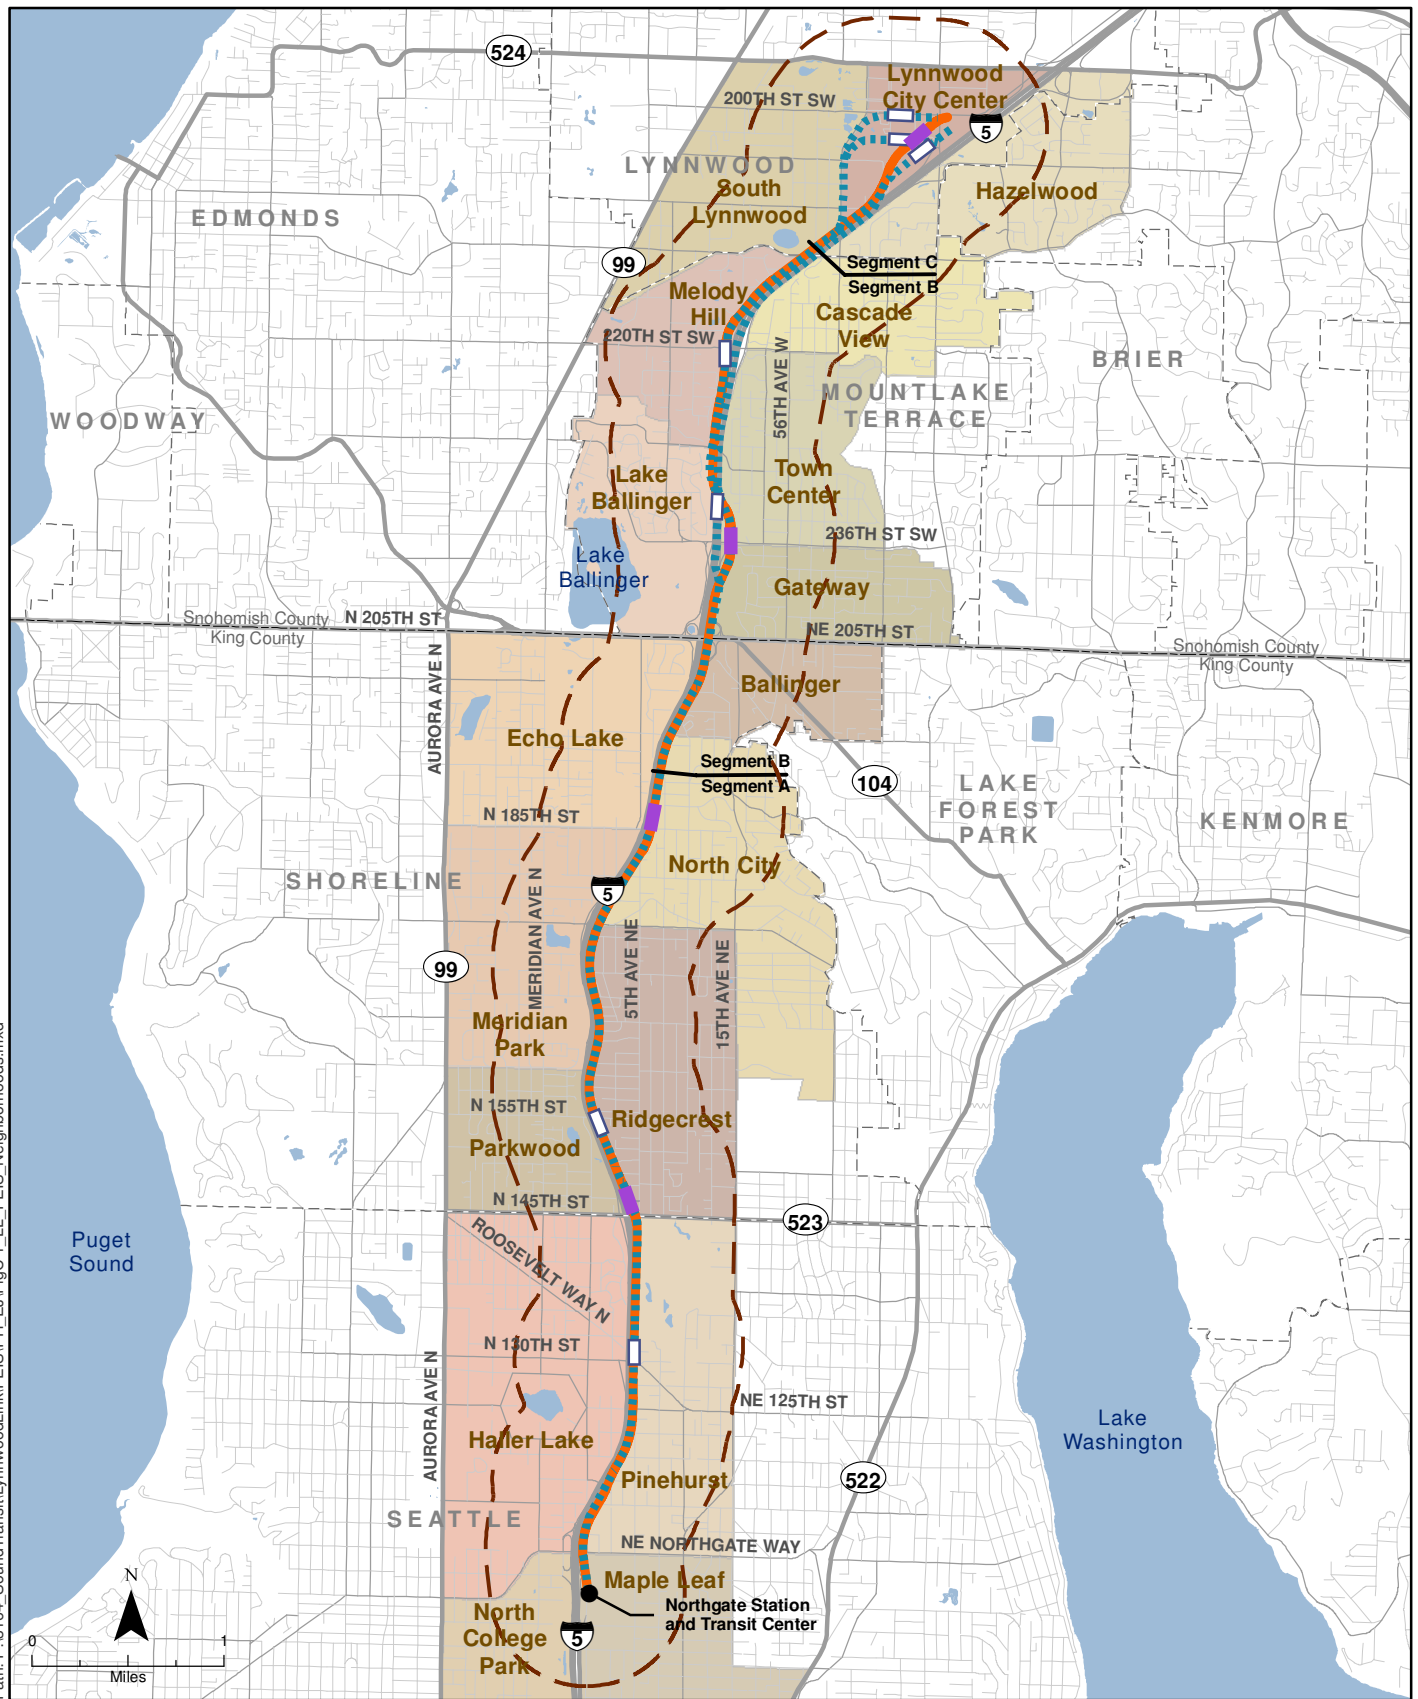

C.4.2 Minority Populations

The study area population is racially and ethnically diverse. Attachments C-2 through C-7 present the demographic characteristics of neighborhoods in the study area, and Attachments C-7 through C-12 provide demographic data for populations within approximately 0.5 mile of the alternative alignments and stations. Figure C-2 shows the distribution of minorities within the project corridor based on the 2010 decennial census. The map is colored to show the geographic distribution of 2010 census blocks for different proportions of minorities.

Minorities (non-White and Hispanic persons) comprise 37 percent of the study area population. Some neighborhood elementary schools reflect even higher proportions of non-White and Hispanic groups; over 19 percent of students are enrolled in transitional bilingual programs, particularly Spanish, Chinese, Korean, Vietnamese, Tagalog, and several African languages (WOSPI 2012).

Sound Transit and FTA invited federally recognized tribes to be involved in the project, and to suggest areas or facilities of particular interest or concern. Section C.5.3 discusses tribal outreach. Census data for the corridor show Native Americans comprise about 1.6 percent of the population.

Figure C-1
Neighborhoods

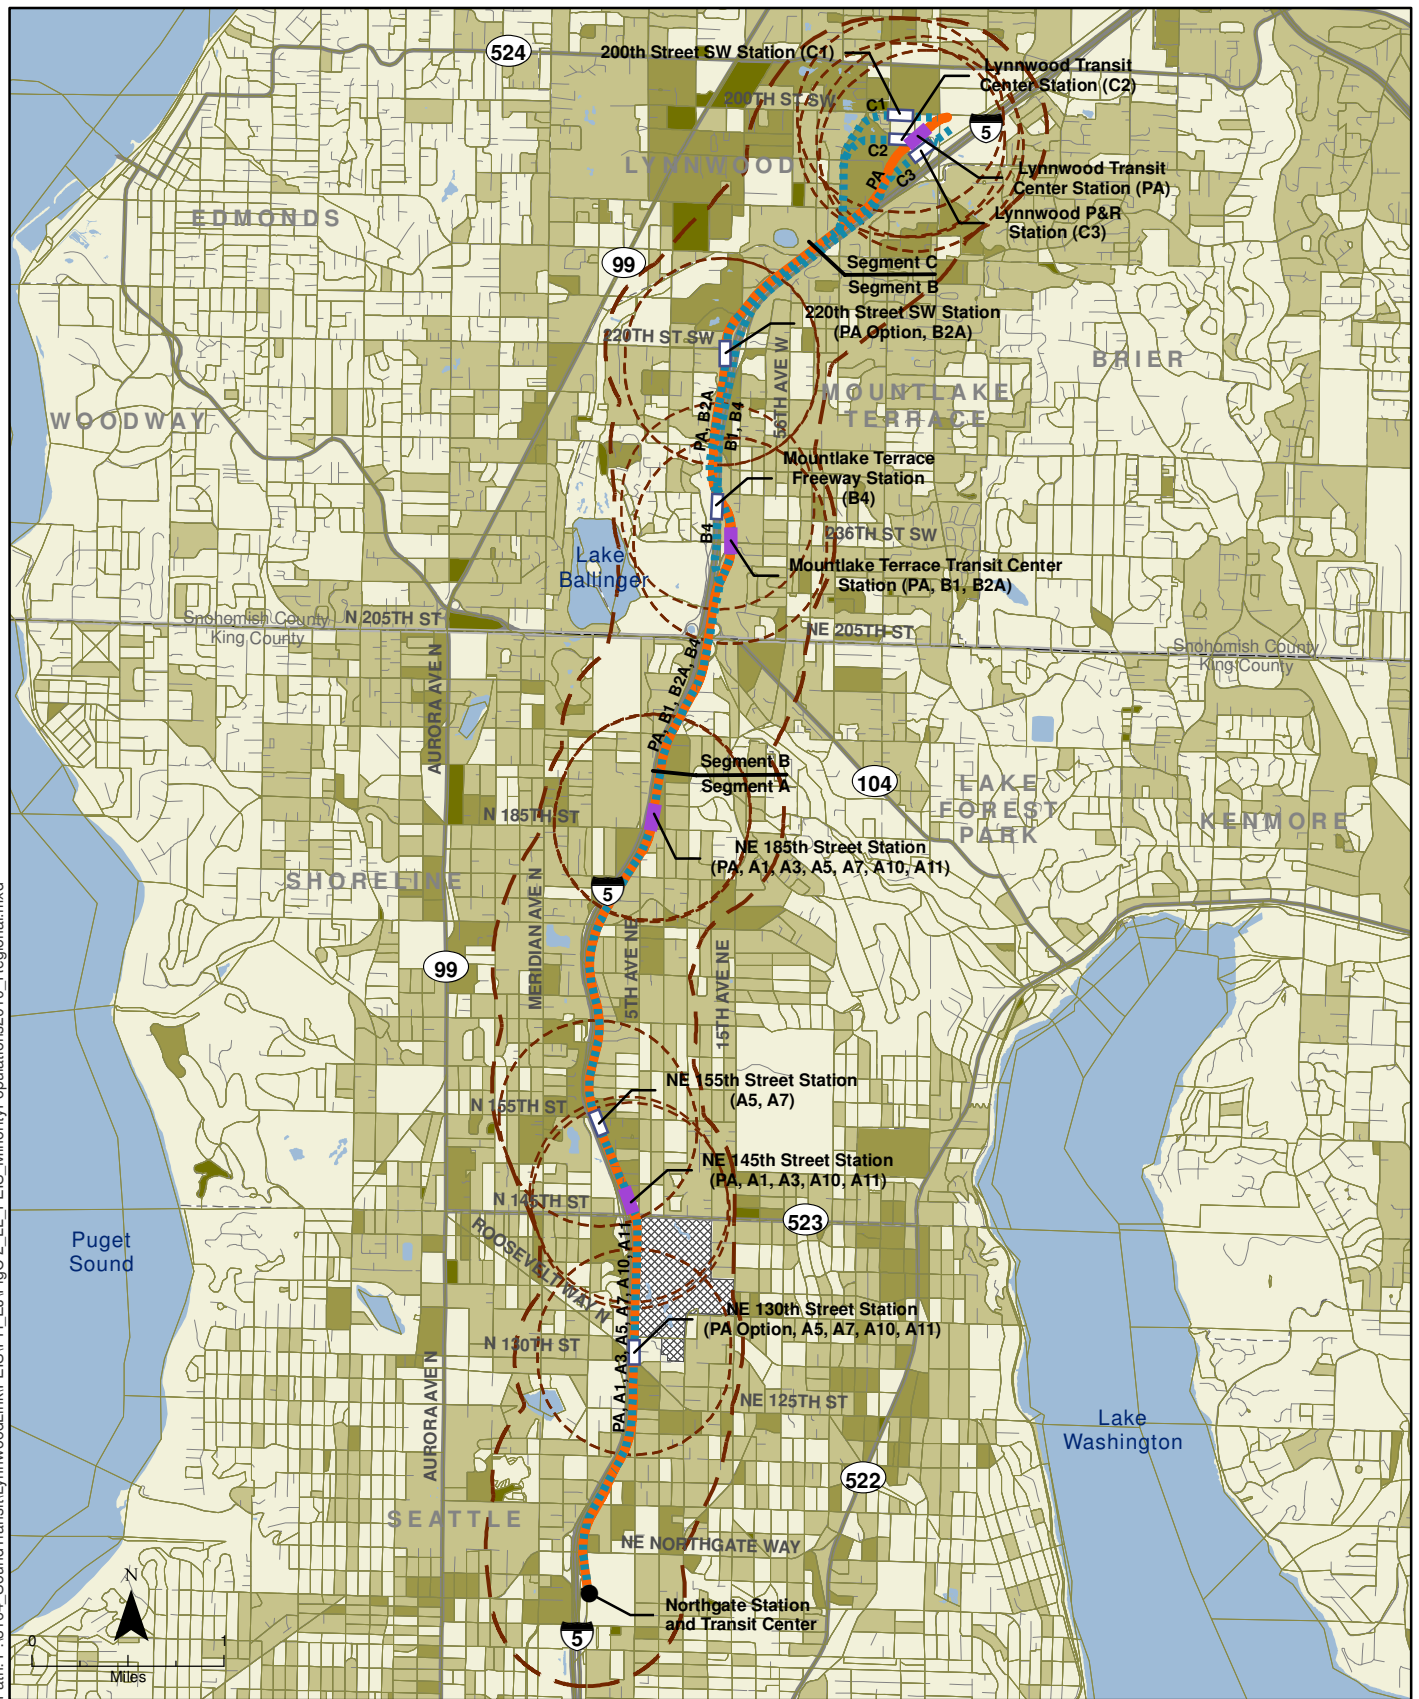

Lynnwood Link Extension

The community facilities represent the racial, ethnic, and low-income populations residing in the project corridor neighborhoods. Examples include the Korean Catholic School, Berhane Hiwot Eritrean Church, Evangelical Chinese Church, Saint Mary's Coptic Orthodox Church (Egyptian), and the Vietnamese Alliance Church. These religious institutions serve families within the project corridor and the region. Some also function as ethnic cultural centers with co-located elementary schools and calendars of events that include recreational programs, craft and language classes, and folk dancing. Several of the Catholic churches have Spanish-language services and church schools with scholarship funds available for low-income students. Attachment C-13 lists community facilities close to proposed light rail transit stations.

The highest concentrations of minority populations are in the Lynnwood City Center and South Lynnwood neighborhoods, where minorities comprise more than 50 percent of the population in these neighborhoods (see Attachment C-2). Asians are by far the dominant non-White race in most neighborhoods. The proportion of populations of one other race alone or mixed race exceeding Asian populations occurs in only four neighborhoods. These racially diverse characteristics appear to be correlated with sizable Hispanic populations.¹

In addition, Sound Transit recently conducted a Title VI analysis of the transit agency's service district (urbanized areas of Snohomish, King, and Pierce counties). Using 2010 decennial census data, this analysis determined that 31.13 percent of the district's population is minority (Sound Transit 2013).

¹ The reason for the high proportions of persons reporting in the census data that they are of some other race alone is because Hispanic persons often consider their Hispanic ethnicity a race.

C.4.3 Foreign-born and Limited English-proficient Populations

To help identify racial and ethnic minority populations, research was conducted to identify foreign-born and limited English-proficient populations. While not all such populations would be considered a minority group under the Executive Order for Environmental Justice, their communication needs were considered as the project's outreach staff developed the project's communication and public involvement plans. Foreign-born individuals comprise an estimated 21 percent of the population in census tracts adjacent to the project corridor (Census 2010b) and where data also indicate minority populations are present. Slightly more than half (54 percent) of these foreign-born individuals were born in Asian countries, mainly from China (14 percent), the Philippines (11 percent), Korea (8 percent), and Vietnam (7 percent). These population groups are sizable, each comprising over 1,000 individuals. An additional 20 percent are from Latin American countries, with nearly three-quarters from Mexico. African-born individuals, particularly from Ethiopia and Eritrea, comprise approximately 10 percent of the foreign-born population. These foreign-born individuals live throughout the study area.

About 75 percent of the study area population speaks only English, but an estimated 13 percent do not speak English very well (Attachment C-4). In some census tracts, larger proportions (exceeding 20 percent) have difficulty with English. For comparison, Sound Transit's recent Title VI analysis of the transit agency's service district determined that only 4.86 percent of the district's population either does not speak English or does not speak English well (Sound Transit 2013).

Of all persons who speak a foreign language, the largest proportion includes those who speak Spanish—an estimated 25 percent. Individual census tracts, however, have foreign-language-speaking populations exceeding 35 percent. Chinese is the most common of the Asian languages spoken, at 16 percent. Korean and Vietnamese represent 8 percent and 5 percent, respectively. An additional 10 percent speak an African language, particularly Ethiopian and Eritrean, based on statistics concerning the place of birth of foreign-born individuals. An estimated 9 percent speak Tagalog. The foreign languages in each of these six language groups are spoken by an estimated 1,000 or more persons.

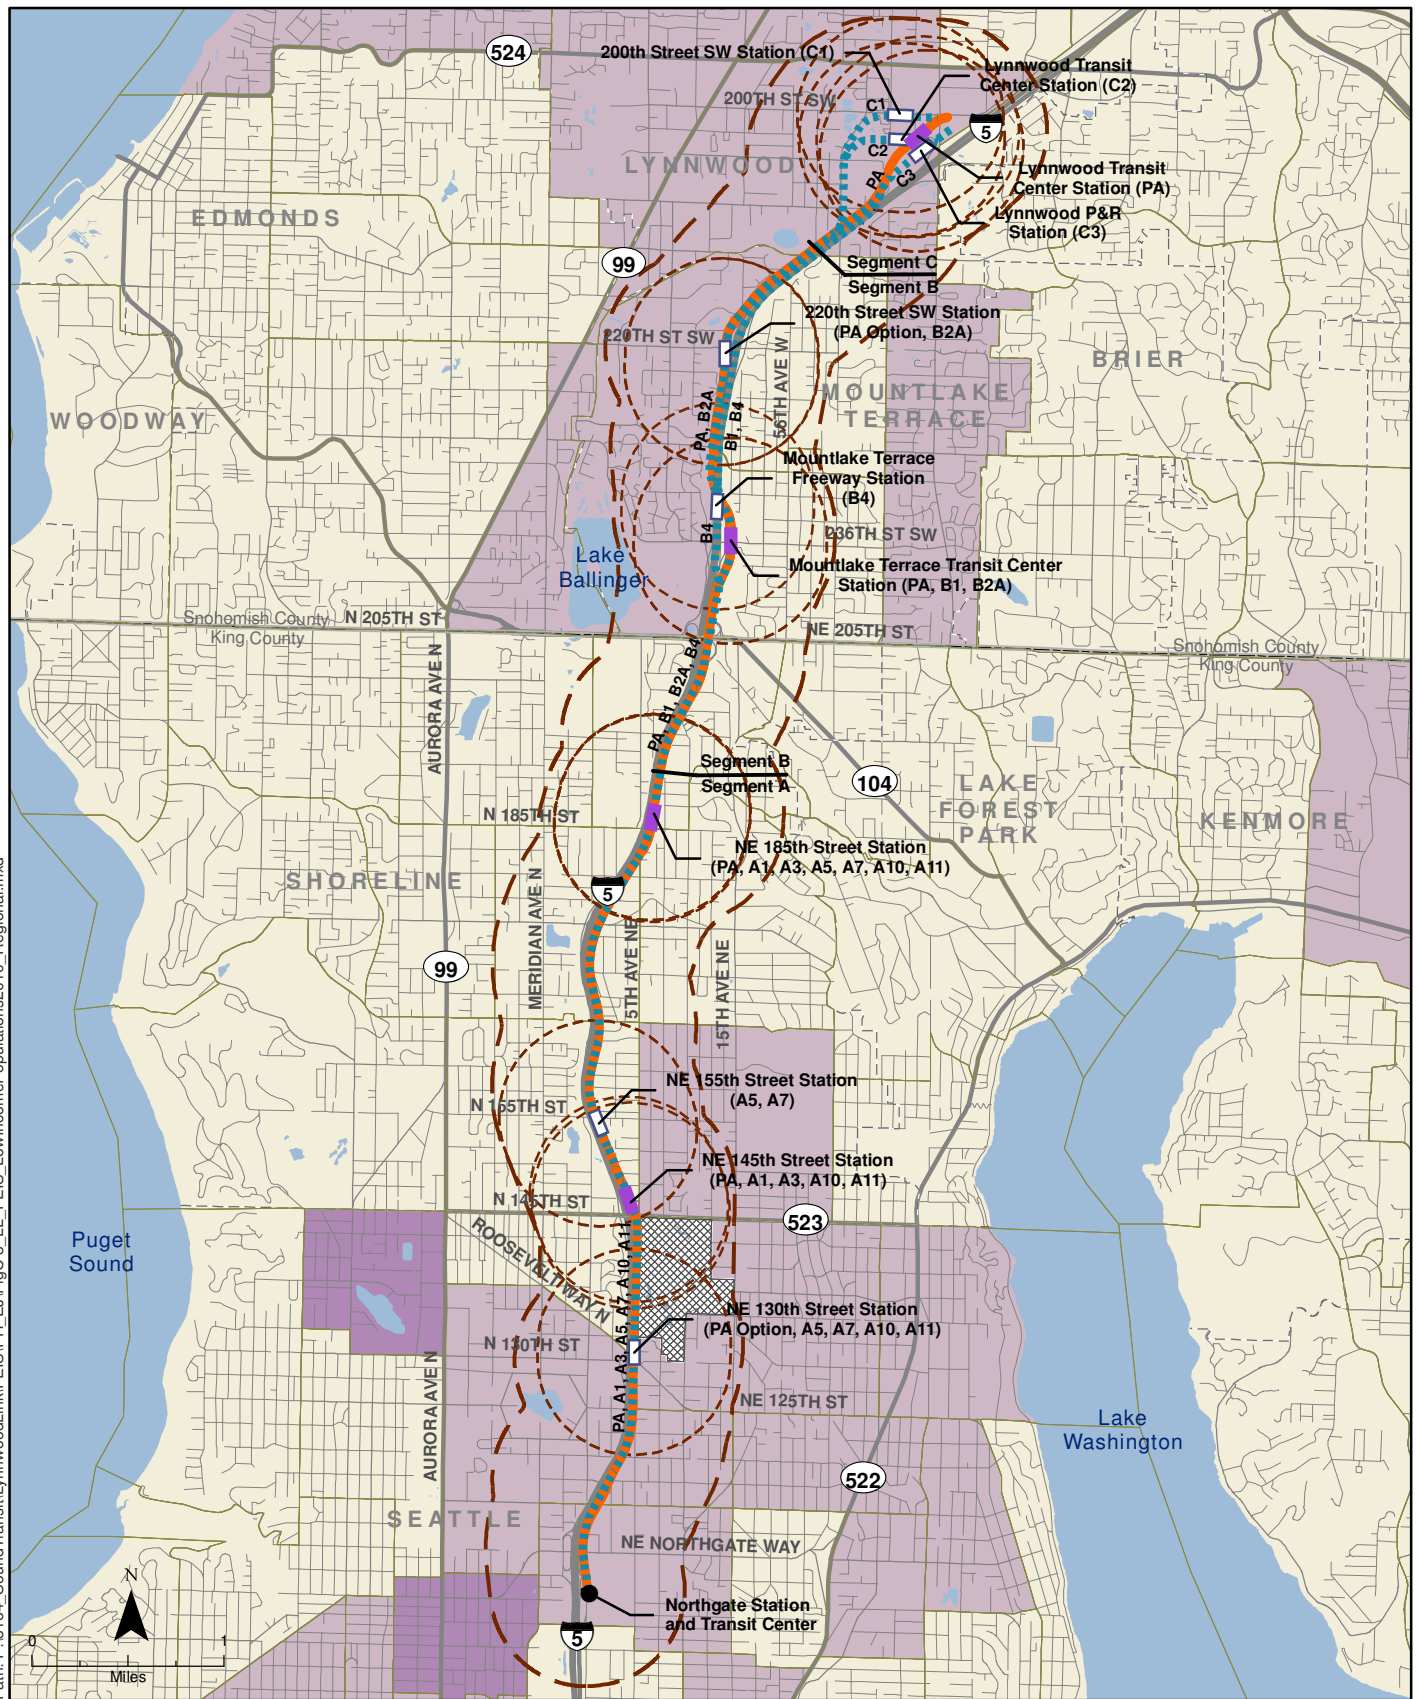

Sound Transit also contacted public elementary schools to identify the three most common languages spoken by students enrolled in the school's Transitional Bilingual Program (Attachment C-12). In addition to the languages indicated above, the survey confirmed the students speak Russian, Ukrainian, and Somali.

C.4.4 Low-income Populations

Median household income (2009) was \$56,300, although 11.3 percent of the study area population lives at or below the poverty level (Census 2010a, 2010b). For comparison, the recently completed Sound Transit Title VI analysis of the transit agency's service district determined that 11.24 percent of the district's population is low income (Sound Transit 2013).

Figure C-3 shows the geographic distribution of low-income populations in the study area based on 2010 census tract data. The highest densities of low-income persons are found east of I-5 at about NE 145th Street and west of I-5 between NE 205th Street and the Lynnwood City Center. Attachment C-7 lists poverty characteristics by corridor neighborhood. None of the census tracts in the corridor are predominantly low-income populations.

An additional analysis was conducted using finer-grained 2000 census block group data (Figure C-4) because the 2010 American Community Survey did not publish reliable income information at the census block group level. Figure C-4 shows the geographic distribution of different proportions of low-income populations. The older data retain value because low-income populations tend to live in clusters rather than spread broadly across the study area (Census 2011). Low-income populations are correlated geographically to the 2010 census tracts that also have higher levels of low-income populations. However, Figures C-2 and C-4 show only a loose correlation between the 2000 lower income block groups and the 2010 census blocks with more minority populations; the Lynnwood area is the only exception. Areas with higher percentages of low-income populations in 2000 block groups are generally the same as the 2010 census tracts. Areas with minority populations do not tend to greatly overlap with low-income areas, except in Lynnwood.

C.5. OUTREACH TO MINORITY AND LOW-INCOME POPULATIONS

With minorities and low-income persons in the study area, Sound Transit’s public outreach program includes a targeted effort to engage these populations in the public decision-making process for the Lynnwood Link Extension. The following sections describe the targeted public involvement plan, project scoping, outreach program, and resulting Draft EIS comments from minority and low-income populations. Additional information is in the project’s *Early Scoping Summary Report* (Sound Transit 2010), which was developed during the Alternatives Analysis phase of the project, and in the *Environmental Scoping Summary Report* (Sound Transit 2011c), which covered the project’s public involvement activities at the initiation of the Draft EIS.

Outreach to minority and low-income populations preceding the publication of the Draft EIS is described in Section C.5.3. A summary of comments on the Draft EIS is in Section C.5.4. A description of the targeted outreach to minority and low-income populations since the publication of the Draft EIS is in Sections C.5.5 and C.5.6. The Final EIS Appendix L, Public Involvement and Agency Coordination, has further detail.

C.5.1 Public Involvement Planning

In addition to the formal public meetings and outreach conducted during early scoping and environmental scoping, Sound Transit conducted over 30 stakeholder interviews with public and community service organizations at the start of the project outreach activities in late 2010. The stakeholders described a corridor that is diverse in terms of race, ethnicity, income, employment, language, culture, and knowledge and use of existing transit services. Stakeholders commented they had difficulties accessing some transit services (such as east-west, non-peak period, non-peak direction, and third-shift services). The stakeholders recommended several outreach tools and communication methods to engage community members, and they helped Sound Transit identify community organizations operating in the project corridor that are likely to represent minority and low-income individuals (Table C-1).

The *Public Involvement Plan* (Sound Transit 2011b) presents additional information on the stakeholder interviews and other outreach activities and techniques Sound Transit is using to engage the corridor’s populations. Appendix D of the *Public Involvement Plan* is the *Plan for Involving Hard-to-Reach Populations*, which addresses targeted environmental justice outreach activities for minorities and low-income persons. These public involvement plan elements are considered “living” documents that will be updated as the project progresses and as those in the corridor learn more about the project and its potential impacts.

C.5.2 Project Scoping

C.5.2.1 Early Scoping

On September 27, 2010, the FTA and Sound Transit published an early public and agency scoping notice in the Federal Register to advise government agencies and members of the public that they intended to explore alternatives for improving transit service between Northgate and Lynnwood. The early scoping process was part of the Alternatives Analysis then required under Title 49 USC 5309. The *Early Scoping Summary Report* (Sound Transit 2010), published in December 2010, documents the public's comments, as well as Sound Transit's advertising, public notice, and outreach efforts.

C.5.2.2 Environmental Scoping

On September 29, 2011, Sound Transit and FTA published in the Federal Register a Notice of Intent (NOI) to prepare an EIS and initiate environmental scoping for a light rail project. The NOI invited public and agency comments on the scope of the EIS and announced the public scoping meetings. Sound Transit published the *Environmental Scoping Summary Report* (Sound Transit 2011c) in December 2011, which describes Sound Transit's outreach and the public and agency comments received during scoping. Notifications were published in the following publications: La Raza, Korean Daily, Seattle Chinese Times, Russian World Newspaper, Seattle Chinese Post, and tu Decides. Translated posters and comment forms were available in Korean, Russian, Chinese, and Spanish at the three mid-October scoping meetings.

C.5.3 Targeted Outreach Activities and Comments Prior to the Draft EIS

Since the start of the public outreach activities, Sound Transit has conducted special targeted outreach activities to engage minority and low-income populations. The following paragraphs describe these activities and the major themes of comments received.

Cinco de Mayo Festival Events

In May 2011 and 2012, the public involvement team attended the Familias Unidas Latina Resource Center and South Everett Neighborhood Center Cinco de Mayo festival events. The annual events attracted an estimated 300 to 500 attendees. With a sizable number of Spanish-speaking attendees, booth materials (fact sheet and e-newsletter) were translated into Spanish and a Spanish interpreter was present to answer questions. Most people commented that they were excited about the planned Northgate Station and light rail extension to Lynnwood. Specific comments, however, raised the following concerns: safety and security of transit users, earthquake preparedness, transit use by disabled persons, use of transit midday, noise impacts, and the importance of providing shelter at transit stations. People asked about the project routes, stations, and implementation schedule; project staff added names and contact information to the stakeholders list for future e-newsletter updates (English/Spanish versions). The translated materials were essential because approximately a quarter to half of the interactions were conducted in Spanish.

Ethnic Elders Resources Fair

On October 1, 2011, and September 29, 2012, the public involvement team attended the annual Ethnic Elders Resources Fair at the Everett Community College. Interpreters were available at the 2011 event, and a Spanish-speaking staff member assisted at the booth. The 2012 fair included workshops in Tagalog, Chinese, Vietnamese, Korean, Spanish, Russian, and English to accommodate the diverse elderly residents. Most booth visitors were identified as Korean, Vietnamese, or Russian; many spoke limited English but were aided by translators. The project team mostly fielded inquiries on how to get to and from various destinations using existing transit services.

Drop-in Meetings, Community Briefings, and Project Updates

Additional targeted outreach activities focused on going directly to centers, public venues and events within the communities to help reach individuals that might not be reached through other approaches, and to make it easier for all members of the community to participate in project planning and decision-making. Many of the informal comments on the project during meetings and community briefings in areas

with low-income or minority populations pertained to the final decision-making process, parking at the proposed stations, construction noise and traffic, and property acquisition. This included the following:

- In March 2012, the public involvement team organized drop-in meetings to be held in conjunction with community classes. One meeting was held at the Lynnwood Library at the same time as a Korean computing class; another meeting was held at the Mountlake Terrace Library concurrent with an English as a Second Language class.
- In December 2012, project posters were distributed to a number of organizations providing services to minority and low-income populations in the project corridor. Based on new corridor analysis, the number of languages used to translate printed matter increased from four (Spanish, Korean, Chinese, and Russian) to six (Spanish, Korean, Chinese, Traditional Vietnamese, Tagalog, and Amharic). These same languages were used in three traveling displays placed at various community centers during December 2012. The public involvement team also offered community briefing meetings to over 70 study area community organizations. These included ethnic, faith, neighborhood, and veterans groups; senior centers and public housing authorities; and social service agencies. Some community groups declined offers for briefings, but requested information by email such as copies of briefing meeting materials, newsletters, and links to the project Web site. Others asked to be contacted again in the future. Translations were provided for six foreign languages at some meetings.
- In April 2013, Sound Transit prepared a new project flier that was posted to the project's Web page, mailed to over 83,000 businesses and residents, and emailed to over 2,400 email subscribers. The flier noted the upcoming publication of the Draft EIS and announced the pending comment period and public hearings to be held during the summer of 2013, and included messages in six languages. The flier also stated that property owners who would be affected by potential acquisitions would receive a special letter in advance of the Draft EIS publication and provided with an opportunity to contact or meet with Sound Transit staff.
- Prior to Draft EIS publication, Sound Transit sent letters to all property owners that could be impacted by a full or partial acquisition by any of the alternatives. More than half of those affected contacted Sound Transit staff, and community outreach specialists as well as members of Sound Transit's real estate group worked directly with the potentially affected parties to review the impacts of various alternatives. Staff encouraged them to participate by

making public comments, and they explained the property acquisition process, including Sound Transit's relocation assistance program.

Tribal Outreach

As described in the *Lynnwood Link Extension Coordination Plan* (Sound Transit 2012), FTA and Sound Transit contacted the following federally recognized tribes during environmental scoping: Muckleshoot Indian Tribe, Snoqualmie Tribe, Suquamish Tribe, Tulalip Tribes, and the Yakama Nation. FTA invited these tribes to become participating agencies, but to date, tribal comments have only been received from the Muckleshoot Indian Tribe; the Tribe stated their concerns about impacts on fisheries, habitat, and water quality during scoping, and they also provided comments on an early agency review of the Draft EIS. Sound Transit and FTA met with the Muckleshoot Indian Tribe to further discuss ecosystem and fisheries issues and define additional coordination and analysis for the Draft EIS. In conjunction with the Section 106 process required under the National Historic Preservation Act, Sound Transit and FTA also contacted representatives from the Duwamish Tribe and the Snohomish Tribe, which are not federally recognized.

C.5.4 Publication of the Draft EIS and Comments

The Draft EIS was published July 26, 2013 and was followed by a 60-day comment period ending on September 23, 2013. Sound Transit held public meetings at transit and ADA-accessible public locations in each of the four cities in the project corridor. (See Chapter 6 for more detail on public involvement, and Chapter 7 for a summary of public comments.) Over 600 comment letters were received from government agencies, community organizations, and individuals. Many of the comments expressed a particular preference for one or more of the project alignment and/or station alternatives.

Senior Services, a non-profit agency supported by United Way of King County, submitted comment summaries from two transit planning events held in Shoreline—one for the Korean community (conducted in Korean, not English) and the other for persons of limited incomes, including many disabled persons. Key concerns for the transit facilities included linkage with bicycle and pedestrian trails, ADA-compliance, disabled parking, public safety, and traffic signals to aid vision- and hearing-impaired users. Recommendations for future transit-oriented development near the proposed stations included mixed density and affordable housing, coffee shops, a Korean grocery store, and recreation and fitness facilities.

In addition, the Muckleshoot Indian Tribe sent a comment letter concerning discussion of natural resource issues in the Draft EIS. The Tribe stated Alternative C1 would likely have the fewest impacts to salmon and salmon habitat, and would be preferred by the Tribe. The Tribe requested involvement in future

design efforts related to state-owned culvert replacement and mitigation design to address unavoidable impacts to streams, floodplains, wetlands, and buffers. The Tribe also requested stormwater water quality treatment methods to maximize the removal of heavy metals and oils that may adversely affect salmon.

C.5.5 Targeted Outreach After Publication of the Draft EIS

Sound Transit continued its outreach activities following the Draft EIS release and the subsequent public comment period. These efforts included further outreach to potentially impacted property owners; outreach accompanying fieldwork along the corridor; flyers and newsletters; booths at fairs and festivals throughout the communities; briefings at community group meetings; displays and kiosks at various community venues, with regularly updated project information; and four community drop-in events at libraries and community centers. The kiosks were first displayed in December 2012 and will continue to be displayed at least up to final design of the project.

Following the Sound Transit Board identification of the Preferred Alternative and its subsequent preliminary engineering, Sound Transit sent letters to all property owners newly identified as potentially affected by the refined alternatives. Similarly, with the release of the Final EIS, Sound Transit did an additional mailing to all potentially affected property owners for all of the alternatives evaluated in the Final EIS; this mirrored Sound Transit's mailings prior to the Draft EIS publication.

C.5.6 Publication of the Final EIS and Future Outreach

Public notices alerted the public to the availability of the Final EIS. The notices will be mailed to project area residents and businesses. Sound Transit also notified all commenters and sent a Final EIS Summary and CD to them. The Final EIS will be available for public review in a variety of formats and locations, including the Sound Transit offices and the project Web site (www.soundtransit.org/Projects-and-Plans/Lynnwood-Link-Extension). For additional information, see the Final EIS Fact Sheet.

Targeted outreach activities will continue after the publication of this Final EIS through project final design, construction, and start of operations.

C.6. ENVIRONMENTAL JUSTICE ANALYSIS

This section discusses anticipated adverse and beneficial effects on minority and low-income populations and neighborhoods.

C.6.1 Summary of Potential Impacts

The analysis of potential environmental impacts follows the methodology described in Section C.3.3, Environmental Justice Impacts. Table C-2 identifies potential adverse project effects on human health and the environment and describes impacts on minority and low-income populations. The proposed mitigation and enhancement measures listed in Table C-2 would reduce or minimize the effects on the population as a whole as well as minority and low-income populations. In addition, Table C-2 indicates offsetting benefits for minority and low-income populations. As shown in Table C-2, the project is not anticipated to result in high and adverse effects after mitigation. The impacts are expected to be similar in kind and magnitude as those that would be experienced by the general population living or working along the corridor. Sound Transit's mitigation commitments would avoid and minimize potential high and adverse environmental impacts.

Table C-2. Environmental Impacts, Potential Mitigation, and Benefits for Minority and Low-income Populations

Element of the Environment	Impacts	Impacts on Minority and Low-income Population(s)	Potential Design Measures, Mitigation and Enhancement	Benefit(s) to Minority and Low-income Population(s)
Transportation - Streets - Transit - Bicycle and Pedestrian	<ul style="list-style-type: none"> For the Preferred Alternative and other alternatives, increased local street congestion, and increases in bicycle and pedestrian activity around transit stations, particularly with passenger drop-off/pick-up activity, nearby bus stops, and park-and-ride facilities at some transit stations. Local and arterial intersections affected (below acceptable level of service [LOS]). Existing on-street and off-street parking removed. Spillover parking in neighborhoods near stations may occur. Temporary construction impacts from reduced highway and local roadway capacity, truck traffic, loss of parking, road and nighttime closures, changes in bus routes, reduced capacity of transit park-and-ride bicycle and pedestrian facilities, and changes to property access. Temporary closure of the existing pedestrian bridge over I-5 at NE 195th Street. 	Same as for general populations in the affected neighborhoods.	<ul style="list-style-type: none"> Reconfiguration of the northbound NE 130th Street off-ramp under the Preferred Alternative and Alternatives A1, A5, and A10 to improve highway operations; similar improvements for the NE 145th Street interchange. Mitigation for congestion impacts on local and arterial street intersections includes improvements to No Build conditions or better. Parking management strategies would be coordinated in station areas to minimize spillover parking in neighborhoods. Bicycle and pedestrian improvements would be implemented at transit stations consistent with system access plans to accommodate projected increase in bicycle and pedestrian travel associated with the proposed project. 	<ul style="list-style-type: none"> Regional reduction in automobile travel; similar reduction in bus transit in the high-occupancy vehicle (HOV) lanes would increase capacity and/or improve operations. Increased person throughput (up to 10 percent) in the I-5 corridor, particularly in evening peak periods. Direct rail service from Lynnwood to Northgate, the University District, Capitol Hill, downtown Seattle, the Rainier Valley, and Seattle-Tacoma International Airport. Substantially improved transit service reliability in the corridor, increased frequency throughout the day (5- to 10-minute headways), and daily service extended to 19 hours. Travel time savings to regional destinations, e.g., from Lynnwood to Northgate and downtown Seattle—an estimated 10 to 17 minutes, respectively. A new ADA-compliant bicycle/pedestrian bridge from 232nd Street SW to the Mountlake Terrace Freeway Station (Alternative B4) in the I-5 median (none now).

Table C-2. Environmental Impacts, Potential Mitigation, and Benefits for Minority and Low-income Populations

Element of the Environment	Impacts	Impacts on Minority and Low-income Population(s)	Potential Design Measures, Mitigation and Enhancement	Benefit(s) to Minority and Low-income Population(s)
Acquisition, Displacement, and Relocation	<ul style="list-style-type: none"> Segment A full acquisitions of 65 to 81 parcels and displacement to 109 to 126 residences. Segment B full acquisition of 1 to 6 parcels and displacement of 0 to 5 residences. Segment C full acquisitions of 1 to 80 parcels and displacement of 0 to 77 residences, 1 to 31 business or other. For the Preferred Alternative and all Segment A alternatives, 49 of the 124 residential displacements would be single-occupancy rooming house units. 	<ul style="list-style-type: none"> Properties to be acquired are in areas where low-income and/or minority populations are present, and some individuals from these populations are likely to be affected the same as the general population. 	<ul style="list-style-type: none"> Property owners and displaced residents and businesses would receive compensation and relocation assistance consistent with federal and state regulations, and Sound Transit's Real Estate Property Acquisition and Relocation Policy. Relocation policies require replacement housing to be affordable for the displaced resident. Market research indicates there would be opportunities for residents and businesses to successfully relocate within the general area, including lower-cost, owner-occupied, and rental housing. 	None.
Land Use	No adverse impacts.	No adverse impacts.	None required.	None.
Economics	<ul style="list-style-type: none"> Property acquisition would displace between 9 and 31 businesses, with 60 to 108 employees, in Segment C. Property tax reductions: 0.1 percent in Segment A, 0 to 0.4 percent in Segment B, and 0.2 to 1.1 percent of city revenues. Temporary increase in construction impacts on traffic congestion and reroutes, noise, vibration, dust, and visual obstruction that would affect nearby businesses, particularly near the proposed stations at 220th Street SW and the existing Lynnwood Transit Center. 	<ul style="list-style-type: none"> Businesses that would be displaced in Segment C are located in a neighborhood that is 58.3 percent minority and 18.6 percent low income. Based on the types of businesses displaced and the demographic characteristics of the corridor, some employees of displaced businesses could be minority and/or low-income persons. 	<ul style="list-style-type: none"> See potential mitigation for transportation (Chapter 3); acquisitions, displacements, and relocations (Section 4.1); and noise and vibration (Section 4.7) in the Final EIS. Other construction impact mitigation measures detailed in Section 4.3, but include programs and outreach with businesses to develop a detailed mitigation plan and to coordinate with businesses during construction to minimize impacts that could disrupt business activities. Maintain access as much as possible to each business and coordinate with businesses during times of limited access during construction. 	<ul style="list-style-type: none"> Opportunities for redevelopment in station areas, particularly at 220th Street SW and near the Lynnwood Transit Center, may attract new businesses and jobs to neighborhoods near station areas. Improved access to employment centers and expanded employment opportunities for minority and low-income persons residing in the project corridor. Federal expenditures associated with construction could result in over \$1.233 billion in direct expenditure and annual employment of over 1,200 jobs in the region. Positive construction effects include construction worker

Table C-2. Environmental Impacts, Potential Mitigation, and Benefits for Minority and Low-income Populations

Element of the Environment	Impacts	Impacts on Minority and Low-income Population(s)	Potential Design Measures, Mitigation and Enhancement	Benefit(s) to Minority and Low-income Population(s)
				expenditures at nearby businesses.
Social and Neighborhood	<ul style="list-style-type: none"> • Few to minor effects on community facilities and services. • No cohesion impacts because alternative alignments would not create neighborhood barriers or otherwise divide communities. • No displacement of community facilities. • Temporary construction impacts, including dust, light/glare, noise, and traffic congestion. 	<ul style="list-style-type: none"> • Same as those experienced by the general population. 	<ul style="list-style-type: none"> • See potential mitigation under Acquisitions, Displacements, and Relocations (Section 4.1) in the Final EIS. • Potential mitigation for other elements of the environment (air quality, noise, visual, transportation, etc.) would reduce construction impacts affecting access or the quality of life in adjacent neighborhoods. 	<ul style="list-style-type: none"> • Improved access to some community located in the project corridor as well as other neighborhoods served by the Link system.
Visual and Aesthetics	<ul style="list-style-type: none"> • Light rail alternatives would have areas with high visual impacts. • Removal or thinning of mature trees and dense vegetation currently screening I-5; changed views from the highway; views where the light rail facility or stations would dominate, or where new parking structures are near single-family residences; new and/or taller noise barriers or retaining walls; and lighting. • Temporary construction impacts include clearing, demolition, construction of new facilities, equipment use and storage, material hauling and storage, construction staging areas, and lighting along the corridor. 	<ul style="list-style-type: none"> • Same as those experienced by the general population. 	<ul style="list-style-type: none"> • Aesthetic plans with detailed options for applying various impact minimization measures, including replacement landscaping, would be developed in consultation with affected jurisdictions and communities. • Construction mitigation measures would include shielding light sources and designing construction screens or barriers to limit visibility of work areas. 	None.

Table C-2. Environmental Impacts, Potential Mitigation, and Benefits for Minority and Low-income Populations

Element of the Environment	Impacts	Impacts on Minority and Low-income Population(s)	Potential Design Measures, Mitigation and Enhancement	Benefit(s) to Minority and Low-income Population(s)
	<ul style="list-style-type: none"> Although areas along the guideway and station areas would be landscaped, it would be 15-20 years before mature landscaping would characterize the corridor and 30 or more years before evergreen trees would mature to current screening conditions. 			
Air Quality and Greenhouse Gases	<ul style="list-style-type: none"> No operational impacts. Temporary construction impacts include increased levels of pollutants, particularly emissions from construction equipment and trucks, and fugitive dust and particulates associated with grading and excavation. 	Same as those experienced by the general population.	<ul style="list-style-type: none"> No mitigation is required or proposed for light rail operation. Potential construction mitigation includes mitigation measures and best management practices (BMPs) to control particulate matter (PM₁₀), fine particulate matter (PM_{2.5}), and emissions of carbon monoxide and nitrogen oxides. 	Improved air quality in the longer term due to reduced criteria pollutants and mobile source air toxics compared with No Build Alternative conditions.
Noise and Vibration	<ul style="list-style-type: none"> There are noise- and vibration-sensitive properties along the entire corridor. Without mitigation, noise impacts would occur. The affected sites are mostly in Segment A. No vibration impacts are expected in either Segment B or C. Construction-related noise and vibration. 	No adverse impacts are expected with project design and mitigation measures that control and limit noise and vibration levels.	<ul style="list-style-type: none"> Adverse noise and vibration effects would be mitigated by installing noise walls, special trackwork, sound insulation and other noise abatement measures. Construction activities would implement a variety of measures to comply with local regulatory requirements and ordinances. Any nighttime construction activities would comply with local government ordinances and nighttime noise variances. 	New and relocated noise barriers that mitigate transit noise could also reduce noise levels from traffic on I-5 and other nearby roadways, potentially reducing noise levels to below existing ambient levels.

Table C-2. Environmental Impacts, Potential Mitigation, and Benefits for Minority and Low-income Populations

Element of the Environment	Impacts	Impacts on Minority and Low-income Population(s)	Potential Design Measures, Mitigation and Enhancement	Benefit(s) to Minority and Low-income Population(s)
Ecosystem Resources	<ul style="list-style-type: none"> • Low potential for adverse effects on vegetation, wildlife or fish habitat after mitigation. • Limited wetland and wetland buffer impacts. • Stream crossings are all elevated, and most construction is outside of stream channels. • The project would be designed to comply with all federal, state, and local regulations controlling potential risks to ecosystem resources. 	No adverse impacts to active fisheries, including fishing areas used by tribes or others.	<ul style="list-style-type: none"> • Project design measures would avoid and minimize impacts on environmentally sensitive resources and provide compensatory mitigation measures where adverse effects are unavoidable for no net loss of ecosystem functions. • Construction BMPs would minimize impacts such that no additional mitigation measures would be required. 	None.
Water Resources	The project would result in temporary construction and long-term increased pollution-generating and non-pollution-generating impervious surfaces, changes in water quality and flow control facilities, and placement of columns supporting elevated tracks in stream buffers and Scriber Creek flood plain.	No adverse impacts.	<ul style="list-style-type: none"> • Project would be designed to comply with all federal, state, and local regulations, which would prevent or minimize potential impacts to water resources through project planning, design, and the application of required BMPs (see Appendix I-4.9). • Measures for mitigating construction impacts include compliance with the NPDES permit program. • Construction BMPs. 	None.
Energy Impacts	<ul style="list-style-type: none"> • The light rail alternatives would result in lower energy consumption regionally. • No adverse energy construction impacts. 	No adverse impacts.	None required.	Overall reduction in energy consumption compared to the No Build Alternative would benefit all populations.
Geology and Soils	<ul style="list-style-type: none"> • Low risks for adverse impacts from steep slope and landslide hazard areas. • Corridor located in seismically active region. • Some construction risks from erosion, slope instability, seismic ground-shaking, vibration, settlement, temporary excavations, and dewatering. 	No adverse impacts.	Geology and soils risks would be avoided or minimized with the use of engineering design standards and BMPs.	None.

Table C-2. Environmental Impacts, Potential Mitigation, and Benefits for Minority and Low-income Populations

Element of the Environment	Impacts	Impacts on Minority and Low-income Population(s)	Potential Design Measures, Mitigation and Enhancement	Benefit(s) to Minority and Low-income Population(s)
Hazardous Materials	<ul style="list-style-type: none"> Segment C alternatives require acquisition of all or parts of three to four parcels with higher risk for remaining hazardous materials. Contamination may be encountered during construction. Construction activities could cause accidental release or spill of hazardous materials along the project corridor. 	Same as those experienced by the general population.	<ul style="list-style-type: none"> Environmental due diligence for properties before acquisition, and where hazardous materials are present, management plans and actions would be implemented. Contractors would be required to develop plans to implement BMPs to ensure management of hazardous materials during construction is consistent with state and federal regulations. 	In some neighborhoods with minority and low-income populations, acquired parcels with hazardous materials could be cleaned up.
Electromagnetic Fields	<ul style="list-style-type: none"> No adverse effects because no sensitive equipment would be in operation within 1,000 feet of alternative alignments and stations. Electromagnetic fields would be below exposure guidelines for human health. 	No adverse impacts.	None required.	None.
Public Services, Safety, and Security	Potential construction effects on emergency response times and routes, particularly near Shoreline Fire Department Fire Station No. 65 on NE 155th Street.	Same as experienced by the general population.	Minimize construction impacts through coordination with police, fire, and local emergency response services.	None.
Utilities	<ul style="list-style-type: none"> No long-term impacts on utilities under any segment alternative, although some utility facilities may be relocated during construction to ensure long-term access. Short-term temporary construction impacts on utilities. 	Same as for the general population.	<ul style="list-style-type: none"> Coordination with utilities during final design. Design measures to minimize the effects of stray current. Potholing and preconstruction surveys during final design. Construction of temporary utility lines, if needed, to ensure continuous service or to minimize disruptions. 	None.
Cultural, Archaeological, and Historic Resources	None.	No adverse impacts.	Develop Inadvertent Discovery Plan prior to ground-disturbing construction activities.	None.

Table C-2. Environmental Impacts, Potential Mitigation, and Benefits for Minority and Low-income Populations

Element of the Environment	Impacts	Impacts on Minority and Low-income Population(s)	Potential Design Measures, Mitigation and Enhancement	Benefit(s) to Minority and Low-income Population(s)
Parks and Recreational Resources	<ul style="list-style-type: none"> • Jackson Park Golf Course and a nearby trail affected by changed views for elevated alternatives. Northacres Park and Twin Ponds Park could be impacted by transit patrons parking under some alternatives. • Ridgecrest Park affected by acquisition of a sliver of property, changed views, and partial removal of a berm and mature trees, but park and facility activities can continue. • Shoreline Stadium affected by a sliver parcel acquisition for the Preferred Alternative and A1; reduced parking and removal of a small space adjacent to the track, but no change in use. The Interurban and Scriber Creek trails in the Lynnwood area would each be crossed overhead by elevated guideways, but trail functions would not change. • Scriber Creek Park affected by elevated guideway columns in the park under Alternative C1; alignment over wetland area adjacent and south of park under Alternative C2 would affect views from the park. • Temporary construction impacts would include visual, noise, traffic congestion, and temporary trail detours or modified park access. 	Same as experienced by the general population.	<ul style="list-style-type: none"> • Sound Transit would work with the park owner or manager to minimize operation and construction impacts and provide compensation where parkland must be acquired. • Potential unauthorized parking at Northacres Park and Twin Ponds Park would be addressed by signage and parking control and management measures. • Restoration of affected park and trail areas. • For temporary trail and partial park closures during construction, Sound Transit would coordinate with appropriate local jurisdictions to develop detours or alternate access and provide public information and signage to allow for continued use. 	Several of the parks would receive improvements as part of the proposed mitigation developed to address impacts that would benefit minority and low-income populations to the same degree as the general population.

C.6.2 Transit Service Benefits

Overview

The Lynnwood Link Extension would improve transportation for people living, working, and shopping in the study area. The new light rail line would particularly provide transit benefits for people living and working within 0.5 mile of the proposed transit stations, which could be easily accessed by foot. For others, transit station connections would be provided by bicycle, bus service, taxi, and private vehicle.

As discussed in the *Lynnwood Link Extension Transportation Technical Report*, project transportation benefits include the following:

- Increased transit access to regional employment opportunities, activity centers, and retail shopping districts
- Increased person throughput within the project corridor, particularly transit users
- Increased reliability for travel by transit
- Increased transit services with increased frequency compared to bus transit services

Increased transit services through extended hours of operation throughout the corridor. The following subsections discuss these benefits to minority and low-income populations, many of whom are dependent upon transit.

Improved Access to Regional Activity Centers

The Lynnwood Link Extension connects the major communities of north Seattle and the cities of Shoreline, Mountlake Terrace, and Lynnwood. Moreover, the light rail extension connecting to the Central Link light rail system provides service to regional activity centers at Northgate, the University District, downtown Seattle, communities to the south, and the Seattle-Tacoma International Airport. The East Link extension to Mercer Island, Bellevue, and Overlake, as well as the Federal Way Link extension, further expand the number of regional activity centers accessible by rail when the Lynnwood Link Extension opens for operation.

The light rail system improves access to many community and regional activity centers. The Lynnwood Link, Central Link, and East Link extensions together have light rail stations within 0.5-mile walking distances of the following:

- Higher education: North Seattle Community College, University of Washington, Seattle Central Community College

- Health facilities: Group Health Lynnwood Medical Center, UW Medical Center, UW Neighborhood Shoreline and Northgate Clinics, Polyclinic at Northgate, Group Health at Bellevue, Overlake Medical Center and Hospital, University Hospital, and other downtown Seattle hospitals and clinics
- Shopping: Lynnwood City Center, Mountlake Terrace Town Center, Northgate Mall, University District, and downtown Seattle
- Sports stadiums: Husky Stadium, Century Link Field and Event Center, and Safeco Field
- Museums and cultural venues: Burke Museum of Natural History, Henry Art Gallery, Meany Hall for the Performing Arts, Floyd and Delores Jones Playhouse, Seattle Art Museum, Frey Art Museum, Benaroya Hall, 5th Avenue Theatre, Paramount Theatre, and Washington State Convention Center

Minority and low-income populations, especially those who are transit-dependent, would benefit from the more reliable, frequent, and faster access by light rail to these many community and regional activity centers. They would also have improved access to employment opportunities associated with the regional activity centers in Lynnwood, Northgate, University District, downtown Seattle, East King County including Bellevue and Overlake, and the Seattle-Tacoma International Airport. Attachment C-13 indicates the station access to nearby community facilities.

Improved Access to Transit

Walking to the new transit stations would provide residents within 0.5 mile of the station the most reliable access to the new light rail service because they could control their departure and travel times, and would not be dependent on making connections with other modes of transportation.

Table C-3 lists the total population residing within 0.5 mile of the proposed light rail stations for the segment alternatives and the proportions of the population estimated to be minority and low income. Based on this analysis, all of the alternatives would improve access to transit services for minority and low-income populations. In Segment B, the Preferred Alternative optional station and Alternative B2A would provide access to greater numbers of minority populations than the other Segment B alternatives due to the station at 220th Street SW. The alternatives in Segment C would substantially improve access to transit services to minority and low-income populations due to the substantially higher concentration of these populations within 0.5 mile of any of the three transit station locations in Lynnwood.

Table C-3. Access to Light Rail Stations for Minority and Low-income Populations

Segment	Number of Stations	Total Census Block Population Within 0.5 Mile of Stations	Percent Minority	Percent Low Income
Segment A				
Preferred Alternative	2	12,300	36.1	10.1
Alternative A1	2	12,300	36.1	10.1
Alternative A3	2	12,300	36.1	10.1
Alternative A5	3	18,900	35.8	10.3
Alternative A7	3	18,900	35.8	10.3
Alternative A10	3	17,300	36.6	10.3
Alternative A11	3	17,300	36.6	10.3
Segment B				
Preferred Alternative	1	4,800	31.1	9.7
Alternative B1	1	4,800	31.1	9.7
Alternative B2	1	4,800	31.1	9.7
Alternative B2A	2	8,800	33.4	12.4
Alternative B4	1	5,000	28.3	10.0
Segment C				
Preferred Alternative	1	4,900	48.1	11.8
Alternative C1	1	4,200	47.7	11.8
Alternative C2	1	4,200	48.6	11.8
Alternative C3	1	4,600	48.7	11.8

Source: U.S. Census Bureau, 2010 Decennial Census and 2006-2010 American Community Survey.

Note: Calculations of the total population residing within 0.5 mile of the stations for each alternative excludes overlapping areas where residents may be within 0.5 mile of more than one station. In addition, the 2010 census blocks have been aggregated to best fit the 0.5-mile buffer area surrounding the stations. Estimates of portions of the census block populations residing within 0.5 mile of the stations were not calculated.

Improved Transit Service Hours and Headways

Currently, three bus transit agencies operate in the Lynnwood Link corridor—King County Metro, Community Transit, and Sound Transit (express buses). Several King County Metro bus routes operate during peak, non-peak, and evening hours in King County. Community Transit primarily operates peak-direction, peak-period buses that serve portions of the corridor, including local buses that provide service in Snohomish County communities during peak and non-peak periods, but not during the evening hours. Sound Transit's ST Express regional bus service provides two-direction, all-day service between major regional destinations with no more than two buses per hour. Midday, off-peak, and weekend transit service is less frequent than during the peak periods.

In contrast, light rail service would serve the entire corridor during peak, daytime, and evening hours with at least four trains per hour from about 5 am to 12 midnight—an estimated 19 hours per day. The light rail would operate with midday headways of 5 to 10 minutes, compared to 15 minutes for the most frequent bus routes and 30- to 60-minute headways for most non-peak bus routes. The light rail

service would be available for more hours of the day than existing bus service, particularly in the northern portion of the corridor in Snohomish County. This improved transit service would benefit all patrons, including low-income and transit-dependent persons, particularly those traveling to and from jobs during non-peak periods, to and from multiple places of employment each day, or to and from jobs with swing and graveyard shifts.

Comparative Costs of Transit Service Fares

Light rail fares have not yet been established for the Lynnwood Link Extension. Existing fare formulas for the light rail service on Link are less expensive than equivalent bus services, and Sound Transit anticipates that Link fares will remain similar to or less expensive than typical bus fares. As of March 2015, low-income residents may qualify for reduced fare transit passes on King County Metro and Sound Transit.

Transit Travel Time Savings

On average, 2035 peak period transit travel time for the Preferred Alternative and other light rail alternatives for trips between Lynnwood and Shoreline to downtown Seattle would provide an estimated 5- to 16-minute travel time savings compared to the No Build Alternative.

For the Final EIS, Sound Transit updated the analysis of the specific transit travel time savings benefitting minority and low-income populations. The measure of travel time savings is an output of the Sound Transit Ridership Model (2011) and is referred to as user benefits. The updated modeling analysis incorporates the Puget Sound Regional Council's new July 2013 Land Use Baseline. The model measures the total number of annual person-hours of travel time savings for the model forecast analysis zones (FAZs). For example, if the user benefit is 1,000, then transit users residing in the FAZ as a group benefitted by saving 1,000 hours of travel time over 1 year. Figure C-5 illustrates travel time savings in forecast year 2035 in the project corridor for the Preferred Alternative, other alternatives would be similar.

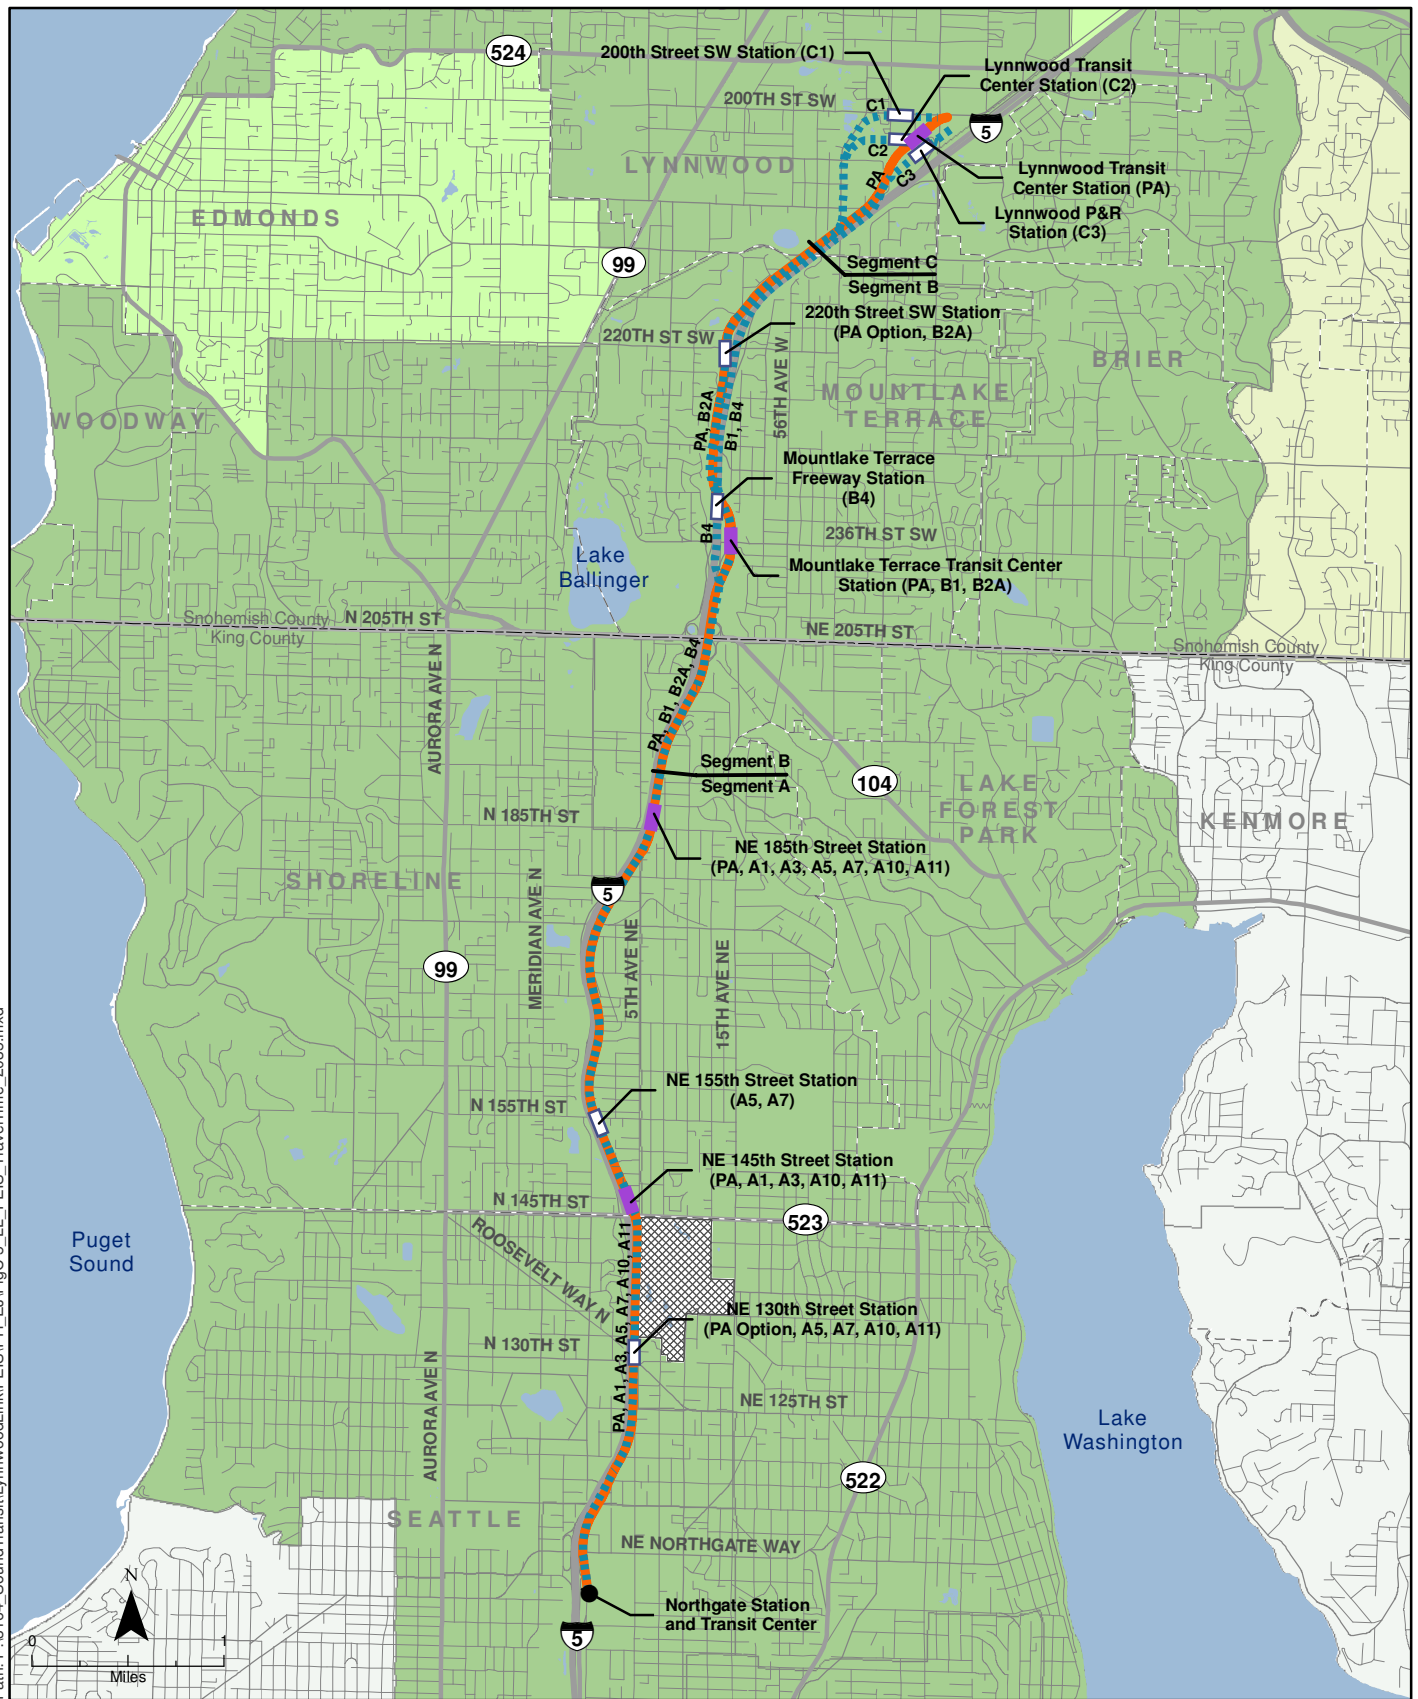

The travel time saving benefits were divided into four categories of annual person-hours: 0 to 25,000; greater than 25,000 to 50,000; greater than 50,000 to 75,000; and greater than 75,000. The 2035 average for the 165 FAZs was approximately 37,000 annual person-hours for the study area as calculated by the travel demand forecast model. The FAZs with greater than 75,000 annual person-hours represent the highest benefits attributable to the light rail alternatives.

Transit Travel Time Savings for Minority Populations

To assess the potential effects on travel time savings, or user benefits, for minority populations, Figure C-2 was visually compared to the map of corridor 2035 travel time savings shown in Figure C-5. A review of the literature indicates that it is reasonable to assume the 2010 locations of minority populations represent the locations of these populations in the future. Figures C-2 and C-5 show that the minority populations are located in FAZs with the two highest categories of travel time savings. Together, this analysis confirms that transit travel time benefits for minority populations are positive throughout the project corridor and generally are among the highest category of user benefits.

Transit Travel Time Savings for Low-income Populations

A similar analysis was conducted to assess potential effects on transit travel time savings for low-income populations. Figure C-5, which shows travel time savings in 2035, was compared to Figures C-3 and C-4 showing the distribution of low-income populations based on the 2010 decennial census and the 2006–2010 American Community Survey, respectively. Moreover, neighborhoods low income populations correlate to those with transit dependent populations, i.e., households with no access to a personal vehicle (Attachment C-7). In particular, the Pinchurst, South Lynnwood, and Lynnwood City Center neighborhoods have more than 17 percent of the population at or below poverty level, and the transit dependent populations also make up more than twice the study area average. Again, comparison to the travel time savings map shows benefits for low-income populations are positive throughout the corridor and generally are among the highest category of user benefits.

in 2035 for the
Preferred Alternative

Lynnwood Link Extension

C.7. CONCLUSIONS

FTA and Sound Transit have assessed the potential for the Lynnwood Link Extension to have disproportionately high and adverse effects on minority and low-income populations, in accordance with Executive Order 12898 and USDOT Order 5610.2.

Based on the findings of impacts described in the Final EIS and considering the mitigation measures identified, project impacts would not be high and adverse, and they would not alter the character, functions, or interactions of any of the corridor neighborhoods. Design measures, BMPs, and mitigation commitments would reduce the severity of individual or cumulative impacts on all populations, including minority and low-income populations, to levels that would not be high and adverse. The impacts would not be predominantly borne by, or appreciably more severe for minority and low-income populations. In addition, the project has offsetting benefits to all populations.

The 18 neighborhoods in the study area are diverse. Minority and low-income populations reside all along the corridor. The highest concentrations of these populations are in the South Lynnwood and Lynnwood City Center neighborhoods, both of which have predominantly minority populations (greater than 50 percent).

The primary impacts of the project affecting individuals or businesses would be from property acquisition and displacement, but compensation and relocation assistance in accordance with federal regulations and Sound Transit policies would prevent these impacts from being high and adverse. Sound Transit anticipates some low-income and minority individuals would be affected by residential and business acquisitions, based on demographic information for the corridor communities and as a result of public outreach including meetings with property owners. While property acquisitions and the resulting displacements would be unavoidable, they would be mitigated through Sound Transit's real property acquisition policy, including its compensation and relocation assistance program.

Moreover, the Lynnwood Link Extension would have offsetting benefits. The light rail alternatives would improve access to regional activity centers and employment opportunities. Light rail transit would be more reliable and more frequent, with increased hours of service. These improvements would particularly benefit transit-dependent persons, including those having more than one job, or working swing and graveyard shifts due to extended operating hours of the light rail system compared to the bus transit systems. The light rail extension would reduce air quality criteria pollutants and mobile source air toxic pollutants compared to the No Build Alternative. Ambient noise levels may be reduced, particularly where no noise barriers currently exist or where replacement noise barriers would be constructed. Because of recent planned and proposed changes

in municipal comprehensive and neighborhood plans, proposed stations in Mountlake Terrace, Shoreline, and especially Lynnwood could result in more intensive land uses, economic development, and mixed land uses to support neighborhood livability and sustainability. The project would benefit the same individuals and businesses that are likely to experience the project's adverse effects.

FTA has concluded that Sound Transit's Lynnwood Link Extension would not result in disproportionately high and adverse effects on minority and low-income populations.

APPENDIX C ATTACHMENTS

Attachment C-1. Neighborhood Descriptions

There are 18 neighborhoods adjacent to the Lynnwood Link Extension corridor. With the exception of one neighborhood, the names and boundaries of these neighborhoods are defined by local governments—the Cities of Seattle, Shoreline, Mountlake Terrace, and Lynnwood. The boundaries of the Hazelwood neighborhood, which is located east of I-5 at the north terminus of the corridor, was defined by Sound Transit, and reflects the neighborhood’s common name. The demographic characteristics are based on U.S. Census data for minorities (Census 2010a) and low income (Census 2010b).

Maple Leaf

The Maple Leaf neighborhood is located south of Northgate Way between I-5 and 15th Avenue NE, Lake City Way, and NE 85th Street. The northwestern corner of the neighborhood is dominated by the Northgate Mall and higher density residential development and offices. Single-family residential housing dominates the remainder of the neighborhood. The neighborhood population totals about 9,400, and is less diverse racially and ethnically than most of the corridor neighborhoods with 27.7 percent minority.

North College Park

The North College Park neighborhood is located south of Northgate Way between I-5, Aurora Avenue, and NE 85th Street. The western edge of the neighborhood is highway-oriented commercial development along Aurora Avenue. Higher density townhouse development projects have been constructed as infill replacing older single-family residential development. The eastern portion of the neighborhood is dominated by the North Seattle Community College and the northeastern area encompasses medical office buildings and high-density residential complexes surrounding Northwest Hospital. This neighborhood population is about 6,700. It is 38.3 percent minority with over 18 percent Asian and approximately 6 percent Black, and 17.1 percent of the population are at or below poverty level.

Haller Lake

The Haller Lake neighborhood is located between I-5 and Aurora Avenue and extends from Northgate Way to NE 145th Street. The private Lakeside School campus is located in the northeast corner of the neighborhood. The southern portion is dominated by the Northwest Hospital and the Evergreen-Washelli Cemetery. The remainder of the neighborhood is largely single-family residential. The population is about 8,200 with 38.0 percent minority; approximately 15 percent is Asian, almost 11 percent other races, and over 7 percent Black. Ten percent of the population lives at or below the poverty level.

Pinehurst

The Pinehurst neighborhood is located east of I-5 between NE Northgate Way and NE 145th Street (the Seattle city limits). The Jackson Park Golf Course dominates the northern one-third section of the neighborhood, while the southern edges are commercial developments north of the Northgate Mall that include several higher density residential complexes. In addition, there are several higher density residential complexes on the south side of NE 125th Street west of the neighborhood commercial district. The neighborhood population totals over 7,800 with minorities comprising over 41 percent (17 percent Asian and 9 percent Black). About 14 percent of the population lives at or below the poverty level.

Parkwood

To the west of I-5, the Parkwood neighborhood extends west to Aurora Avenue between NE 145th and NE 160th Streets. Twin Ponds Park and two elementary schools are key neighborhood community facilities. The King County Metro North Base bus maintenance yard is located in the northeast corner of the neighborhood adjacent to I-5. A highway-oriented commercial district extends along Aurora Avenue south of the Aurora Square Shopping Center at NE 155th Street. The central portion of this neighborhood is single-family residential. This small neighborhood has a population of about 3,400 with minorities comprising approximately 39 percent (over 17 percent Asian, 10 percent other races, and almost 10 percent Hispanic). About 8 percent of the population lives at or below the poverty level.

Meridian Park

The Meridian Park neighborhood west of I-5 extends from NE 165th Street north to NE 185th Street and west to Aurora Avenue. The neighborhood contains several neighborhood parks as well as highway-oriented commercial development along Aurora Avenue. The City of Shoreline has just completed a major streetscape project along this portion of Aurora Avenue. The Shoreline School District Room Nine Community School and the Meridian Elementary School are centrally located in the neighborhood. The population is about 5,400 with over 38 percent minority (over 19 percent Asian and 7 percent Black), and 7 percent at or below poverty level.

Ridgecrest

The Ridgecrest neighborhood extends east of I-5 from NE 145th to NE 175th Streets and is largely single-family residential in character. The Shoreline Fire Station No. 65 is at NE 155th Street just east of I-5. The Ridgecrest Elementary School is located on NE 165th Street. The NE 175th Street corridor is a major arterial with several churches and a library. The neighborhood commercial district is at the

intersection of NE 175th Street and 15th Avenue NE. The population is about 6,400, over 36 percent minority, including 17 percent Asian. About 15 percent of the neighborhood population is at or below poverty level.

North City

The North City neighborhood east of I-5 is bounded by NE 175th and NE 195th Streets. The neighborhood is primarily single-family residential. A neighborhood commercial district is located on 15th Avenue NE between NE 175th and NE 185th Streets. The North City Park and a closed elementary school are located in the northwesterly corner of the neighborhood, immediately east of I-5. The closed school is occupied by two preschools. The neighborhood is less diverse than other neighborhoods with less than 34 percent minority. Asians comprise about 15.5 percent of the approximate 6,400 residents. The population living in poverty is about 9 percent.

Echo Lake

The Echo Lake neighborhood on the west side of I-5 extends from NE 185th Street north to the county boundary at NE 205th Street. This major arterial is SR 104 and connects Lake Forest Park, Ballinger Way, I-5, and Edmonds. The western edge of the neighborhood is characterized by highway-oriented commercial development along Aurora Avenue. The southeast corner of the intersection of Aurora Avenue and SR 104 is the Aurora Village and Costco shopping center. The Shoreline Conference Center, Shoreline School District athletic fields, and the Shoreline Pool are located in the southeastern corner of the neighborhood off NE 185th Street. Most of the north-central portion of the neighborhood is dominated by two large residential subdivision developments and the Holyrood Cemetery. The population is about 5,800 with total minorities comprising 36.9 percent—largely Asian at over 20 percent, and 9.5 percent of the neighborhood population is at or below the poverty level.

Ballinger

Located east of I-5 and straddling SR 104 (Ballinger Way) is the Ballinger neighborhood, which extends from NE 195th to NE 205th Streets. This neighborhood encompasses the I-5/SR 104 interchange where there is considerable commercial and office development east of the interchange. Some multifamily residential developments are north of this commercial district. Farther east, Ballinger Way divides single-family residential development. With a population of just over 3,000 and 37.7 percent minority, the Ballinger neighborhood is diverse with over 9 percent Black and over 13 percent Asian. The population living in poverty is about 9 percent.

Lake Ballinger

The Lake Ballinger neighborhood encompasses Lake Ballinger and is located west of I-5. The Lake Ballinger Golf Course, Lake Ballinger Park, and Nile Temple Country Club and Golf Course are northeast of the lake. Highway-oriented commercial development characterizes the western edge of the neighborhood along Aurora Avenue. North of 220th Street SW, the neighborhood is mixed higher density housing with small pockets of single-family residences. This neighborhood is the second least populated neighborhood with a total population of about 2,100. It is less diverse than other corridor neighborhoods with more than 78 percent White and total minorities (race and ethnicity) comprising less than 26 percent of the population. More than 15 percent of the population lives in poverty.

Gateway

The Gateway neighborhood on the east side of I-5 extends between 212th and 236th Streets SW. Except for the commercial and office development in the immediate proximity of the I-5/244th Street SW interchange, the neighborhood is characterized by single-family residential development with several small parks. With a population of about 3,000, the neighborhood is racially diverse with 35.0 percent minority, including more than 12 percent Hispanic. About 4 percent of the neighborhood population lives in poverty.

Town Center

The Town Center neighborhood is bounded by 236th and 220th Streets SW east of I-5. Key community facilities in the neighborhood include the Terrace Creek Park and Mountlake Terrace Public Library. The City's civic center, fire and police stations, and library are adjacent to the Veterans Memorial Park and northeast of the existing Mountlake Terrace Transit Center. The Mountlake Terrace Recreation Pavilion and Evergreen Playfield Complex are in the center of the neighborhood. The Terrace Park School and Jack Long Park are located in the northwest portion of the neighborhood immediately east of I-5 and surrounded by single-family residences. With a population of about 3,500, this neighborhood is about 29 percent minority, including 10 percent Hispanic. About 4 percent of the population lives at or below the poverty level.

Melody Hill

The Melody Hill neighborhood is west of I-5 between 226th and 212th Streets SW. The western portion of the neighborhood is dominated by commercial and office development, particularly the large Premera Blue Cross office complex. A small single-family residential area is located immediately south of Halls Lake. Another commercial development is located immediately west of I-5 between 226th and

220th Streets SW. With a total population of about 2,300 with approximately 42 percent minority, the neighborhood is diverse with about 18 percent Hispanic. The population living in poverty exceeds 15 percent.

Cascade View

East of I-5, the Cascade View neighborhood extends from 220th to 212th Streets SW and is largely medium-density multifamily residential in character. The southeast corner of the neighborhood is anchored by the Mountlake Terrace High School. Mountain View Villa in the eastern portion of the neighborhood is a manufactured home community. This neighborhood has a total population of almost 4,800 that is diverse (37.9 percent minority) comprising Asian (more than 15 percent) and Hispanic populations (almost 10 percent). About 9 percent of the population lives at or below the poverty level.

Hazelwood

The Hazelwood neighborhood encompasses portions of incorporated Lynnwood and unincorporated Snohomish County west of I-5 between 212th and 196th Streets SW. The Hazelwood Elementary School is centrally located within the neighborhood. A highway-oriented commercial development is in the southeast quadrant of the 44th Avenue West intersection and single-family residences are west of the arterial. A shopping center is in the northeast quadrant of the neighborhood at the intersection of 44th Avenue West and 212th Street SW. The 28th Avenue West intersection is characterized by highway commercial development (e.g., Lowes, Whole Foods, and two hotels). The population of this neighborhood is 3,700 with over 38 percent minority including approximately 22 percent Asian and 6.6 percent Hispanic. Less than 7 percent of the population lives at or below the poverty level.

South Lynnwood

The South Lynnwood neighborhood extends from 212th Street SW at the Lynnwood city boundary north to 196th Street SW between Aurora Avenue and 52nd Avenue West. Scriber Lake and park are located in the northwest corner of the neighborhood. Substantial highway-oriented commercial development and offices are located along this portion of Aurora Avenue as well as the north side of 212th Street SW. In addition, light industrial and multifamily residential complexes are found in this area. There are a few sizable undeveloped parcels in the neighborhood and several mobile home or manufactured housing communities. The neighborhood has a large Group Health medical clinic. Non-residential development is located west of I-5. The neighborhood population is almost 5,500 with over 51 percent minority (about 15 percent Asian, over 7 percent Black, and almost 24 percent Hispanic). About 19 percent of the population lives at or below the poverty level.

Lynnwood City Center

The Lynnwood Transit Center is located in the very southern portion of the Lynnwood City Center neighborhood, which extends from I-5 north to 192nd Street SW and east of 52nd Avenue West. Except for a small area of higher density multifamily residential development immediately north and west of the Lynnwood Transit Center, the remainder of the neighborhood is largely commercial. Uses include restaurants, big box retail stores, hotels, and banks. The Lynnwood Convention Center is located in the northwest corner of the neighborhood. Other major uses include several medical centers, the Lynnwood municipal court, the City's police department offices, and several churches. Alderwood Mall is located several blocks north of the neighborhood boundary. With many non-residential land uses, the population of this neighborhood is the smallest of any of the corridor neighborhoods at only 1,600, though it is very diverse with the minority populations comprising over 58 percent, including 22.6 percent mixed races and 30 percent Hispanic. The percentage of the population at or below the poverty level is 18 percent.

Source: U.S. Census Bureau, 2006-2010 American Community Survey.

MLT = Mountlake Terrace

Notes: The above 2006–2010 American Community Survey data have not been adjusted for margins of error; and at census tract (CT) geographies, the margins of error can exceed 35%, which is considered acceptable in social research. Based on 2006–2010 American Community Survey data for the place of birth for those not born in the United States, the two largest groups born in Africa were from Ethiopia and Eritrea. Sums may not total due to rounding.

Attachment C-5. Neighborhood Household Characteristics

Neighborhoods	Total Population	Age	Types of Households			
		Children/Elderly %	1-Person Households %	Husband-Wife Family Households %	Family Households with Children %	Non-Family Households %
Lynnwood City Center	1,600	26/7	39	13	29	9

**Re: Lynnwood Link Extension Project
Request for Agreement with Determination of Temporary Occupancy**

Dear Mr. Krauss:

As part of the Lynnwood Link Extension Environmental Impact Statement (EIS) documentation process, the Federal Transit Administration (FTA), as the lead federal agency, is finalizing the Section 4(f) evaluation of the potential impacts of the project on public parks and recreational facilities, including the Interurban Trail and the Scriber Creek Trail, both in the City of Lynnwood. Based on our review, we believe these are significant recreational resources for purposes of Section 4(f).

Under Section 4(f) of the U.S. Department of Transportation Act of 1966, FTA cannot approve a transportation project such as Lynnwood Link Extension that requires the use of publicly-owned land from a significant public park, recreation area, or wildlife and waterfowl refuge, or any land from a significant historic site, unless it determines that there is no "feasible and prudent avoidance alternative"¹ to the use of land from the property; and that the action includes "all possible planning" to minimize harm to the property resulting from such use.

Please note that the project's elevated guideway would cross above the trails. This would require air rights, but no physical property would be acquired. For purposes of Section 4(f), FTA distinguishes the need for air rights from the acquisition of land, so that there is no use as long as the aerial structure does not substantially impair the utility of the trail.

However, the law exempts temporary occupancies of land that are so minimal as to not constitute a use. In order to qualify as a temporary occupancy, the following conditions must be satisfied (23 CFR 774.13(d)):

¹ Definitions are found at 23 CFR § 774.17

- The duration of the use must be less than the time needed for construction of the project, and there should be no change in the ownership of the land;
- Both the nature and magnitude of the changes to the Section 4(f) property must be minimal;
- There must be no anticipated permanent adverse physical impacts, nor interference with the protected activities, features, or attributes of the property on either a temporary or permanent basis; and
- The land being used must be fully restored.

Federal guidance encourages early coordination with officials with jurisdiction over the Section 4(f) resource. Before publishing the Draft EIS, Sound Transit and FTA consulted with the City regarding the potential impacts to the trails and possible mitigation of these impacts.

The table below summarizes the Lynnwood Link project's anticipated impacts on the trails as well as Sound Transit's proposed mitigation.

Evaluation of Project's Use of Lynnwood Trails

Resource	Relevant Alternatives	Impacts on Resource	Mitigation Measures/ Enhancement	4(f) Impacts After Mitigation
Interurban Trail	Preferred Alternative	Construction: temporary trail closure of 6 to 12 months.	Detours with public information and signage directing users to detours; restoration of affected areas after construction	Temporary occupancy
Scriber Creek Trail	Preferred Alternative	Construction: temporary trail closure of 6 to 12 months.	Detours with public information and signage directing users to detours; restoration of affected areas after construction	Temporary occupancy

FTA intends to make a finding of temporary occupancy regarding the project's impacts on the two trails, and we are requesting the City's agreement with this finding.

Federal regulations stipulate that officials with jurisdiction over the Section 4(f) resource must document their agreement with a temporary occupancy finding (23 CFR 774.13(d)(5)). We ask that you sign and return this letter, or your own letter in its place, to confirm the City's concurrence with the temporary occupancy determination based on the four criteria and its

City of Lynnwood
July 25, 2014
Page 3

agreement with the potential mitigation. Your letter of concurrence, along with FTA's complete Section 4(f) analysis, will be included in the project's Final EIS.

As the project is further refined during final design, Sound Transit will continue to coordinate with the City regarding detour plans and the restoration of the affected areas.

If you have any questions, please contact Dan Drais (Daniel.Drais@dot.gov; (206) 220-4465).

Sincerely,

 Rick Krochalis, Administrator

**Re: Lynnwood Link Extension Project
Request for Concurrence with Determination of *De Minimis* Use**

Dear Mr. Deal:

As part of the Lynnwood Link Extension Environmental Impact Statement (EIS) documentation process, the Federal Transit Administration (FTA), as the lead federal agency, is finalizing the Section 4(f) evaluation of the potential impacts of the project on public parks and recreational facilities, which includes Ridgecrest Park in the City of Shoreline (Exhibit 1). We understand that the City has determined this to be a significant park.

Under Section 4(f) of the U.S. Department of Transportation Act of 1966, FTA cannot approve a transportation project such as Lynnwood Link Extension that requires the use of publicly-owned land from a significant public park, recreation area, or wildlife and waterfowl refuge, or any land from a significant historic site, unless it determines that:

- There is no “feasible and prudent avoidance alternative”¹ to the use of land from the property; and
- The action includes “all possible planning” to minimize harm to the property resulting from such use; or
- The Administration determines that the use of the property, including any measure(s) to minimize harm (such as any avoidance, minimization, mitigation, or enhancement measures), will have a *de minimis* impact. A *de minimis* impact is one that will not adversely affect the features, attributes, or activities qualifying the property for protection under Section 4(f).

Federal guidance encourages early coordination with officials with jurisdiction over the Section 4(f) resource. Before publishing the Draft EIS, Sound Transit and FTA consulted with the City

¹ Definitions are found at 23 CFR § 774.17

of Shoreline regarding the potential impacts to Ridgecrest Park and possible mitigation of these impacts. In March 2013, the City signed a letter indicating its preliminary concurrence with a *de minimis* determination.

Federal regulations stipulate that “officials with jurisdiction over the Section 4(f) resource must concur in writing” with a *de minimis* finding (23 CFR 774.5(2)). The regulations also require that an opportunity for public review and comment concerning the effects of the project on the Section 4(f) resource be provided prior to such written concurrence. The distribution of the Draft EIS for review and comment by the public, agencies, and organizations has satisfied this requirement.

With the comment period on these documents completed, and based on the City’s 2013 letter, FTA intends to make a *de minimis* finding on Ridgecrest Park, and we are requesting the City’s final concurrence with this finding. Its letter of concurrence will be included in the project’s Final EIS. FTA’s final Section 4(f) determination will also be included in the Final EIS.

The table below summarizes the Lynnwood Link project’s anticipated impacts on Ridgecrest Park and Sound Transit’s proposed mitigation.

City of Shoreline Determination of Section 4(f) Use of Ridgecrest Park

Purpose of Park	Relevant Alternatives	Impacts on Resource	Mitigation Measures/ Enhancement	4(f) Impacts After Mitigation
Sporting events/active recreation	Preferred Alternative; all segment A alternatives	Operational: Use of about 0.3 acres at western edge, removing berm and trees; additional visual impacts. Construction: potential temporary construction easement of area along proposed right of way.	Landscaping/ restoration of affected area; barrier installed between light rail and park to function like existing berm in buffering I-5 noise and views of I-5; design and rebuilding of 1 st Avenue from NE 159 th to NE 161 st Street, in coordination with the City; transfer of replacement property at the south end of the park, or other property as agreed to with the City, consistent with the requirements of Forward Thrust, and developed to a level comparable to displaced park area; and outreach in adjacent neighborhood to inform roadway and park design, in coordination with the City.	<i>de minimis</i>

As Sound Transit has discussed with the City, the project would rebuild 1st Avenue NE from NE 159th Street to NE 161st Street. This area would be City right-of-way and is not included in the

July 25, 2014

Page 2

calculations to replace the acquired park property. The remainder of the impacted non-park parcels after roadway construction (parcels 770, 775, and 776) constitutes the currently proposed replacement area for the acquired property in Ridgecrest Park, assuming that complies with Forward Thrust requirements. Per the City's email dated June 10, 2014 and verification with King County Department of Natural Resources, parcel 764 is not owned by the City of Shoreline or King County, is not a park property, and does not require replacement.

Sound Transit will continue to work with King County to prepare the land conversion process and to ensure that the requirements of Forward Thrust are met.

We ask that the appropriate City official sign and return this letter, or your own letter in its place, to confirm the City's concurrence with the Section 4(f) *de minimis* determination and its agreement with the potential mitigation, and also the City's concurrence that the Lynnwood Link Extension will not adversely affect the features, attributes, or activities qualifying the park for protection under Section 4(f).

As the project is further refined during final design, Sound Transit will continue to coordinate with the City of Shoreline to review and finalize design for restoration of the affected area and for the replacement property at the properties currently identified or other property as agreed to by the City.

If you have any questions, please contact Dan Drais (Daniel.Drais@dot.gov; (206) 220-4465).

Sincerely,

for Rick Krochalis, Administrator
Region 10

Shoreline, WA 98155

**Re: Lynnwood Link Extension Project
Request for Concurrence with Determination of *De Minimis* Use**

Dear Ms. Miller:

As part of the Lynnwood Link Extension Environmental Impact Statement (EIS) documentation process, the Federal Transit Administration (FTA), as the lead federal agency, is finalizing the Section 4(f) evaluation of the potential impacts of the project on public parks and recreational facilities, which includes the Shoreline School District's Shoreline Stadium (Exhibit 1). We understand that the District has determined this to be a significant park.

Under Section 4(f) of the U.S. Department of Transportation Act of 1966, FTA cannot approve a transportation project such as Lynnwood Link Extension that requires the use of publicly-owned land from a significant public park, recreation area, or wildlife and waterfowl refuge, or any land from a significant historic site, unless it determines that:

- There is no "feasible and prudent avoidance alternative"¹ to the use of land from the property; and
- The action includes "all possible planning" to minimize harm to the property resulting from such use; or
- The Administration determines that the use of the property, including any measure(s) to minimize harm (such as any avoidance, minimization, mitigation, or enhancement measures), will have a *de minimis* impact. A *de minimis* impact is one that will not adversely affect the features, attributes, or activities qualifying the property for protection under Section 4(f).

Federal guidance encourages early coordination with officials with jurisdiction over the Section 4(f) resource. Before publishing the Draft EIS, Sound Transit and FTA consulted with the

¹ Definitions are found at 23 CFR § 774.17

District regarding the potential impacts to the stadium property and possible mitigation of these impacts. In March 2013, the District signed a letter indicating its preliminary concurrence with a *de minimis* determination.

Federal regulations stipulate that “officials with jurisdiction over the Section 4(f) resource must concur in writing” with a *de minimis* finding (23 CFR 774.5(2)). The regulations also require that an opportunity for public review and comment concerning the effects of the project on the Section 4(f) resource be provided prior to such written concurrence. The distribution of the Draft EIS for review and comment by the public, agencies, and organizations has satisfied this requirement.

With the comment period on these documents completed, and based on the District’s 2013 letter, FTA intends to make a *de minimis* finding on Shoreline Stadium, and we are requesting the District’s final concurrence with this finding. Its letter of concurrence will be included in the project’s Final EIS. FTA’s final Section 4(f) determination will also be included in the Final EIS.

The table below summarizes the Lynnwood Link project’s anticipated impacts on Shoreline Stadium and Sound Transit’s proposed mitigation.

Shoreline School District’s Determination of Section 4(f) Use of Shoreline Stadium

Purpose of Recreational Resource	Relevant Alternatives	Impacts on Resource	Mitigation Measures/ Enhancement	4(f) Impacts After Mitigation
Sporting events/active recreation	Preferred Alternative; Alternative A1	Operational: Relocated road would require use of about 0.2 acres of parking lot and stadium area on east side of property. No impact to use of stadium facility. Construction: Potential additional temporary parking reduction, visual and noise impacts.	Restoration of area after construction and facility access improvements to be defined in coordination with Shoreline Public Schools during final design.	<i>de minimis</i>

We ask that the appropriate District official sign and return this letter, or your own letter in its place, to confirm the District’s concurrence with the Section 4(f) *de minimis* determination and its agreement with the potential mitigation, and also the District’s concurrence that the Lynnwood Link Extension will not adversely affect the features, attributes, or activities qualifying the Stadium for protection under Section 4(f).

As the project is further refined during final design, Sound Transit will continue to coordinate with the Shoreline School District s regarding restoration of the affected area and finalize the design of the parking area and access to the Stadium.

If you have any questions, please contact Dan Drais (Daniel.Drais@dot.gov; (206) 220-4465).

Sincerely,

for Rick Krochalis, Administrator

ACKNOWLEDGING CONCURRENCE
FOR THE SHORELINE SCHOOL DISTRICT:

By: MARLA S. MILLER

Its: DEPUTY SUPERINTENDENT

Data Sources: (King County, Snohomish County, WSDOT, Sound Transit, Bing Aerial)

- Preferred Alternative
- Area of Affected Park and Recreation Facility
- Area of Impact

Exhibit 1
Shoreline Stadium Impact Area

Lynnwood Link Extension

Shoreline School District

MAR 05 2013

Deputy Superintendent

February 22, 2013

Marla Miller, Deputy Superintendent
Shoreline Public Schools
18560 1st Ave NE
Shoreline, WA 98155

Dear Ms. Miller:

As part of the Lynnwood Link Extension Draft Environmental Impact Statement (DEIS) documentation process, Sound Transit and the Federal Transit Administration (FTA), as the lead federal agency, are evaluating the potential impacts of the project on public parks and recreational facilities. Sound Transit is working with the FTA to prepare a draft Section 4(f) Evaluation that describes the impacts of the project on these facilities. The draft Section 4(f) Evaluation will be included in the DEIS and is expected to be distributed to the public and agencies for comment in the spring of 2013.

The U.S. Department of Transportation Act of 1966 requires a Section 4(f) Evaluation. Under the Act, FTA cannot approve a transportation project such as Lynnwood Link Extension that requires the use of publicly-owned land from a significant public park, recreation area, or wildlife and waterfowl refuge, or any land from a significant historic site, unless a determination is made that:

- There is no feasible and prudent avoidance alternative, as defined in § 774.17, to the use of land from the property; and
- The action includes all possible planning, as defined in § 774.17, to minimize harm to the property resulting from such use; or
- The Administration determines that the use of the property, including any measure(s) to minimize harm (such as any avoidance, minimization, mitigation, or enhancement measures), will have a *de minimis* impact. A *de minimis* impact (23 CFR 774.17) is one that will not adversely affect the features, attributes, or activities qualifying the property for protection under Section 4(f).

Federal guidance encourages early coordination with officials with jurisdiction of the Section 4(f) resource to ascertain the position of the officials to obtain their preliminary views. The intent of our letter is to continue that early coordination and confirm previous discussions between Sound Transit and Shoreline Public Schools staff regarding the project's potential impacts to parks and recreation resources. Throughout the EIS process and project design, should Alternative A1 be identified as the preferred alternative, Sound Transit and FTA will continue to consult with the school district to detail specific mitigation plans.

Federal regulations stipulate that "officials with jurisdiction over the Section 4(f) resource must concur in writing" with a *de minimis* finding (23 CFR 774.5(2)). The regulations also require that an opportunity for public review and comment concerning the effects of the project on the Section 4(f) resource be provided prior to such written concurrence. CFR 774.5, this requirement will be met with the distribution of the Draft EIS for review and comment by the public, agencies, and organizations. FTA will request final concurrence in writing by Shoreline Public Schools on the *de minimis* finding following the comment period for the Draft EIS. At that time, it is anticipated that Shoreline Public Schools will provide final concurrence on *de minimis* determinations for Lynnwood Link Extension. Following the Shoreline Public School's written concurrence, FTA will make final Section 4(f) and *de minimis* determinations, and the Final EIS will include documentation of the Shoreline Public School's concurrence and FTA's determination.

The table below lists Shoreline Park and Stadium as a Shoreline Public School park facility that the Lynnwood Link Extension project would impact. Based on Sound Transit's review, this park resource is considered significant for purposes of Section 4(f). Given the potential project impacts and the proposed potential mitigation, Sound Transit believes that a preliminary *de minimis* determination can be made for Shoreline Park and Stadium.

Shoreline Public Schools Facility and Preliminary Determination of Section 4(f) Use

Resource	Purpose of Resource	Project Alternative	Impact on Resource	Potential Mitigation	Preliminary 4(f) Findings after Mitigation
Shoreline Park and Stadium	Sporting events/active recreation	A1	Operations: Relocated local road would require use of 0.18 acre of stadium area and parking lot on east side of property. Reduced parking, no impact to use of stadium facility. Construction: Potential additional temporary parking reduction, visual and noise impacts.	Restoration of area after construction and facility access improvements to be defined.	<i>de minimis</i>

We ask that you provide your signature on this letter to confirm:

- Shoreline Public Schools agrees Shoreline Park and Stadium is a significant park and recreation resource; and
- Shoreline Public Schools does not object to considering a potential Section 4(f) *de minimis* finding for Shoreline Park and Stadium, and Shoreline Public Schools may provide a letter of concurrence with a *de minimis* finding after further public review and discussion of the Draft EIS and Draft Section 4(f) evaluation, and with general agreement upon appropriate mitigation measures.

This letter will assist Sound Transit as the project progresses toward a preferred alternative that would avoid a Section 4(f) use. Sound Transit acknowledges that a formal concurrence from the Shoreline Public Schools will require further discussions with Shoreline Public Schools staff.

Sincerely,

Steve Kennedy
Senior Planner

Marla Miller, Deputy Superintendent
Shoreline Public Schools
Signature for Preliminary Concurrence

February 6, 2013

Dick Deal, Director
Parks, Recreation and Cultural Services Department
City of Shoreline
17500 Midvale Ave N
Shoreline, WA 98133

Dear Mr. Deal:

As part of the Lynnwood Link Extension Draft Environmental Impact Statement (DEIS) documentation process, Sound Transit and the Federal Transit Administration (FTA), as the lead federal agency, are evaluating the potential impacts of the project on public parks and recreational facilities. Sound Transit is working with the FTA to prepare a draft Section 4(f) Evaluation that describes the impacts of the project on these facilities. The draft Section 4(f) Evaluation will be included in the DEIS and is expected to be distributed to the public and agencies for comment in the spring of 2013.

The U.S. Department of Transportation Act of 1966 requires a Section 4(f) Evaluation. Under the Act, FTA cannot approve a transportation project such as Lynnwood Link Extension that requires the use of publicly-owned land from a significant public park, recreation area, or wildlife and waterfowl refuge, or any land from a significant historic site, unless a determination is made that:

- There is no feasible and prudent avoidance alternative, as defined in § 774.17, to the use of land from the property; and
- The action includes all possible planning, as defined in § 774.17, to minimize harm to the property resulting from such use; or
- The Administration determines that the use of the property, including any measure(s) to minimize harm (such as any avoidance, minimization, mitigation, or enhancement measures), will have a *de minimis* impact. A *de minimis* impact (23 CFR 774.17) is one that will not adversely affect the features, attributes, or activities qualifying the property for protection under Section 4(f).

Federal guidance encourages early coordination with officials with jurisdiction of the Section 4(f) resource to ascertain the position of the officials to obtain their preliminary views. The intent of our letter is to continue that early coordination and confirm previous discussions between Sound Transit and City of Shoreline staff regarding the project's potential impacts to parks and recreation resources. Throughout the EIS process and project design, Sound Transit and FTA will continue to consult with the school district to detail specific mitigation plans.

Federal regulations stipulate that "officials with jurisdiction over the Section 4(f) resource must concur in writing" with a *de minimis* finding (23 CFR 774.5(2)). The regulations also require that an opportunity for public review and comment concerning the effects of the project on the Section 4(f) resource be provided prior to such written concurrence. As per 23CFR 774.5, this requirement will be met with the distribution of the Draft EIS for review and comment by the public, agencies, and organizations. FTA will request final concurrence in

CHIEF EXECUTIVE OFFICER

Joni Earl

writing by the City of Shoreline on the *de minimis* finding following the comment period for the Draft EIS. At that time, it is anticipated that the City will provide final concurrence on *de minimis* determinations for Lynnwood Link Extension. Following the City's written concurrence, FTA will make final Section 4(f) and *de minimis* determinations, and the Final EIS will include documentation of the City's concurrence and FTA's determination.

The table below lists Ridgecrest Park as a City of Shoreline park facility that the Lynnwood Link Extension project would impact. Based on Sound Transit's review, this park resource is considered significant for purposes of Section 4(f). Given the potential project impacts and the proposed potential mitigation, Sound Transit believes that a preliminary *de minimis* determination can be made for Ridgecrest Park.

City of Shoreline Park Facility and Preliminary Determination of Section 4(f) Use

Resource	Purpose of Resource	Project Alternative	Impact on Resource	Potential Mitigation/Enhancement	Preliminary 4(f) Findings after Mitigation
Ridgecrest Park	Sporting events/active recreation	All Segment A Alternatives	Operational: Use of 0.3 acres at western edge, removing berm and trees. Property and visual impacts. Construction: potential temporary construction easement of area along proposed right of way.	Landscaping and restoration of affected area, barrier between light rail and park to maintain functionality of existing berm, replacement property in condition consistent with displaced park area as required by Forward Thrust.	<i>de minimis</i>

We ask that you provide your signature on this letter to confirm:
the City agrees Ridgecrest Park is a significant park and recreation resource; and
the City does not object to considering a potential Section 4(f) *de minimis* finding for Ridgecrest Park, and the City may provide a letter of concurrence with a *de minimis* finding after further public review and discussion of the Draft EIS and Draft Section 4(f) evaluation, and with general agreement upon appropriate mitigation measures.

This letter will assist Sound Transit as the project progresses toward a preferred alternative that would avoid a Section 4(f) use. Sound Transit acknowledges that a formal concurrence from the City of Shoreline will require further discussions with City staff and the Parks, Recreation and Cultural Services Board.

Sincerely,

Steve Kennedy
Senior Planner

Dick Deal, Director
City of Shoreline, Parks, Recreation and Cultural Services Department
Signature for Preliminary Concurrence
